The ITIL guiding principles

Guiding principle	Description
Focus on value	Everything that the organization does needs to create, directly or indirectly, a benefit to the organization. The focus of value principle encourages every organization, including the operations of customers and users. Do not just do things, especially without understanding what's going on inside. It is the leverage. There is a risk to be a goal that is the correct service process, program, project, and people that can be used to create the desired outcome.
Start where you are	The current state should be investigated and assessed, taking into account the fully understood. Do not attempt to do everything at once. Start high, start small, make a commitment to do it, by organizing each into smaller, manageable systems that can be completed and completed in a timely manner. Do not be too much a change focus or work effort.
Progress iteratively with feedback	Work in small, frequent, and often less visible increments that allow for frequent and continuous improvement. Working together on a shared outcome results in faster progress, more resources to operations, and increased likelihood of long-term success.
Collaborate and promote visibility	Working together across organizational boundaries, and local, global, and cross-organizational, creates better outcomes.

Achieving value: costs

Real risks

Achieving desired outcomes requires resources (and therefore costs) and other associated with risk. Service providers help their customers to address outcomes and to design or take on some of the associated risks and costs. On the other hand, service relationships can introduce new risks and costs, and in some cases, can negatively affect some of the intended outcomes after supporting others.

Guerrilla Capacity Planning Neil J. Gunther,2007-01-17 In these days of shortened fiscal horizons and contracted time to market schedules traditional approaches to capacity planning are often seen by management as tending to inflate their production schedules Rather than giving up in the face of this kind of relentless pressure to get things done faster Guerrilla Capacity Planning facilitates rapid forecasting of capacity requirements based on the opportunistic use of whatever performance data and tools are available in such a way that management insight is expanded but their schedules are not A key Guerrilla concept is tactical planning whereby short range planning questions and projects are brought up in team meetings such that management is compelled to know the answer and therefore buys into capacity planning without recognizing it as such Once you have your foot in the door capacity planning methods can be refined in an iterative cycle of improvement called The Wheel of Capacity Planning

Another unique Guerrilla tool is Virtual Load Testing based on Dr Gunther's Universal Law of Computational Scaling which provides a highly cost effective method for assessing application scalability *ITIL for Beginners* David Larson,2016-10-08
