Populations in Transition:

Population trends:

- **Global population change 1930-2020**
 - o In most regions population growth has increased between 1930 and 1960, and then again between 1960 and 1990 (Africa, South America, Australia, Asia) with the exception of North America and Europe
 - o In contrast, the projected changes for 1990-2020 show that the population growth rate will fall all over the globe
- **Exponential growth**
 - o **Increasing /accelerating growth rate**
 - o The world's population is growing rapidly, most of it being recent
 - o Global pop. **Doubled** between **1650 and 1850**, **1850 and 1920**, and **1920 and 1970** (taking less and less time to double)
 - o **Up to 95% of pop. growth is taking place in LDC**
 - o This trend of growth is defined as exponential growth
 - o In spite of this, world population is expected to **stabilize** at about **12 billion** by around **2050-80**
 - o This growth creates:
 - **Pressures on government to provide for their people**
 - **Environmental pressure**
 - **Increase risk of disease and malnutrition**
 - **Greater differences between poor and rich countries**
- **Demographic change and global trends**
 - o **The annual growth rate** is found by subtracting the crude death rate (% of deaths per thousand people, also referred to by number of deaths per thousand) from the crude birth rate (% of births per thousand people, also referred to by the number of births per thousand) and is then expressed as a percentage
 - o The **highest growth rates** are found in **Africa**, and **lowest** in **North America and Europe**
