Robust and Insensitive Design of Multivariable Feedback Systems – Multimodel Design – Irmfried Hartmann, Werner Lange, Rainer Poltmann, 1986 The object of this monograph is to present some optimal design methods in a certain sense for obtaining linear multivariable feedback systems such that they become insensitive or robust properties The treatment is mainly confined to linear time invariant discrete systems with the exception of the sections 3.1 and 3.3 in which it was used linear time invariant continuous systems Sensitivity and robust methods for multivariable feedback systems have been extensively studied about the last decade and the successful development has led to a much better understanding of the performance of insensitive and robust procedures The contribution of this monograph is an improved behaviour of the feedback systems under the influence of disturbance parameter variations and or nonlinear effects with new design methods Furthermore in chapter 3 the reader finds improved necessary and sufficient conditions for robust stability of the closed loop system The authors would like to express their thanks to Mrs Regina Hade who typed with great patience our manuscript and Mrs Monika Thieke who drew the figures and symbols very carefully *Regelungen* Alexander Weinmann, 2013-03-07 Unter Bevorzugung anwendungsnaher und industriell nutzbarer Methoden werden dargestellt Abtastregelungen Mehrgrößen

vermaschte Regelungen verschiedene nichtlineare adaptive und insbesondere robuste Regelungen Beobachter modale Verfahren Der Optimierung von Regelkreisen und dem fallweisen stochastischen Charakter wird Rechnung getragen ebenso der Möglichkeit des Einsatzes ordnungsreduzierender Verfahren Komplexe Stabilitätsfragen der Zustandsraum sowie Darstellungen mit bertragungsmatrizen sind erweitert worden Neu aufgenommen sind die exakte Linearisierung nichtlinearer Regelungen mittels spezieller Transformationen ferner Regelungen auf der Basis von fuzzy logic sowie von künstlichen neuronalen Netzen

Fault Diagnosis Józef Korbicz, Jan M. Koscielny, Zdzisław Kowalczyk, Wojciech Cholewa, 2012-12-06 All real systems in nature physical biological and engineering ones can malfunction and fail due to faults in their components Logically the chances for malfunctions increase with the systems complexity The complexity of engineering systems is permanently growing due to their growing size and the degree of automation and accordingly increasing is the danger of failing and aggravating their impact for man and the environment Therefore in the design and operation of engineering systems increased attention has to be paid to reliability safety and fault tolerance But it is obvious that compared to the high standard of perfection that nature has achieved with its self healing and self repairing capabilities in complex biological organisms fault management in engineering systems is far behind the standards of their technological achievements it is still in its infancy and tremendous work is left to be done In technical control systems defects may happen in sensors actuators components of the controlled object the plant or in the hardware or software of the control framework Such defects in the components may develop into a failure of the whole system This effect can easily be amplified by the closed loop but the closed loop may also hide an incipient fault from being observed until a situation has occurred in which the failing of the whole system has become unavoidable
