The Fundamentals of Financial Statement Analysis as Applied to the Coca-Cola Company Carl McGowan,2014-10-05

Recent stock market crises are exacerbated by investors who don't understand what has been happening to companies because investors lack an understanding of financial ratio analysis. Stock markets are efficient in that they incorporate and even anticipate information about companies based on financial accounting data provided by companies. However, market efficiency results from extensive analysis performed by financial analysts. Much of this financial analysis is based on the analysis of financial information provided by companies and analyzed using financial ratio analysis. This book provides a step-by-step demonstration of how to download data from Internet sources, transfer the data to a spreadsheet, and conduct a financial ratio analysis of any company. The book outlines the steps needed to perform a financial ratio analysis: the financial statements to be retrieved from EDGAR and the five categories of financial ratios used in the financial analysis of the company. The data retrieved from the financial statements is copied to a worksheet and used to compute and graph the financial ratios. The ratios and graphs are used to determine the performance drivers of this company.

Portfolio Optimization Using Fundamental Indicators Based on Multi-Objective EA Antonio Daniel Silva, Rui Ferreira Neves, Nuno Horta,2016-02-11

This work presents a new approach to portfolio composition in the stock market. It incorporates a fundamental approach

using financial ratios and technical indicators with a Multi Objective Evolutionary Algorithms to choose the portfolio composition with two objectives the return and the risk Two different chromosomes are used for representing different investment models with real constraints equivalents to the ones faced by managers of mutual funds hedge funds and pension funds To validate the present solution two case studies are presented for the SP 500 for the period June 2010 until end of 2012 The simulations demonstrates that stock selection based on financial ratios is a combination that can be used to choose the best companies in operational terms obtaining returns above the market average with low variances in their returns In this case the optimizer found stocks with high return on investment in a conjunction with high rate of growth of the net income and a high profit margin To obtain stocks with high valuation potential it is necessary to choose companies with a lower or average market capitalization low PER high rates of revenue growth and high operating leverage
