Normal Cytology Madelyn Lew, Judy Pang, Liron Pantanowitz, 2023-01-01

In the practice of cytopathology cytologists frequently encounter a spectrum of benign normal cells in samples In fact these normal cells frequently comprise the greatest proportion of material present on a cytology slide This is frequently the case in

Pap smears of the uterine cervix urine samples and lung samples such as bronchial brushings Normal cytology can often mimic pathology leading to misdiagnoses especially in cases with reactive and metaplastic changes Moreover cytopathology findings of certain neoplasms can also mimic normal cytology Today cytology laboratories are no longer confined to dealing with just exfoliative specimens and superficial aspirations With interventional radiology as well as endobronchial and endoscopic ultrasound guided fine needle aspirations FNA we increasingly encounter visceral samples Hence cytologists are even likely to encounter normal elements from deep seated organs Sometimes unexpected normal elements may be found within cytology specimens because a FNA procedure has contamination or inadvertently sampled a nearby organ or normal anatomical structure A typical example is the finding of ganglion cells when a FNA is performed targeting a celiac node for cancer staging Elgarby EA et al Frequency and characterization of celiac ganglia diagnosed on fine needle aspiration Cytojournal 2015 12 4 Despite the importance of knowing the spectrum of normal cytology there are limited reference materials available on this topic for cytologists Most cytopathology texts deal with abnormal cytology Often the chapters in these books only devote a few sentences about normal cytology euplasia Our proposed book intends to fulfil this need The book will contain a mixture of text and images atlas Important aspects related to cytology practice will be highlighted such as clinical relevance differential diagnoses mimics and pitfalls The images will include a variety of cytology specimen preparations e g direct smears liquid based samples touch preparations cell blocks and stains e g Diff Quik MGG Papanicolaou H E In selected cases the expected immunoprofile of normal cells will be addressed Each chapter will also include a modest list of helpful and contemporary references

Novel Reliable Approaches for Prediction and Clinical Decision-making in Cancer Ines Zidi,Safa Bhar Layeb, Vera Rebmann,2025-01-14 Cancer is one of the leading causes of death worldwide Significant advances in the understanding of cancer biology have been reported in the last decade Many important driving changes especially immunological deregulations are implicated in cancer development and progression These events lead to cancer complexity and heterogeneity in cancer and play a substantial role in pharmacokinetic variability in anticancer therapies Furthermore it remains difficult to quantify the prevalence of recurrence and metastasis Interestingly omics have shown promising results and are being used to better describe cancer susceptibility prognosis and response to treatment Additionally researchers are still searching for immunological and other cancer signatures particularly relevant for effective cancer prediction Emerging data obtained independently are still insufficient to explain the complexity of cancer Hopefully new comprehensive systemic and combinatorial approaches will yield benefit in the future and will lead to the development of personalized treatment regimens and improved immunotherapies In this research topic we welcome submissions that propose new panels including and not limited to immunological information cytokines signal transduction pathways involving immune receptors immune tolerance molecules extracellular vesicles immune cells etc genetic information related to genes involved in the deregulation of immune functions eg multi SNP CNV medical history imaging

results Authors should present integrative and systemic approaches using clinical data to make reliable predictions of cancer risk and its prognosis and to support cancer treatment management and clinical decision making
