Compiler Construction Principles And Practice Kenneth C. Loudon, 2003 *Write Great Code, Volume 2, 2nd Edition* Randall Hyde, 2020-08-04 Explains how compilers translate high level language source code like code written in Python into low level machine code code that the computer can understand to help readers understand how to produce the best low level computer readable machine code In the beginning most software was written in assembly the CPU s low level language in order to achieve acceptable performance on relatively slow hardware Early programmers were sparing in their use of high level language code knowing that a high level language compiler would generate crummy low level machine code for their software Today however many programmers write in high level languages like Python C C C Java Swift The result is often sloppy inefficient code But you don t need to give up the productivity and portability of high level languages in order to produce more efficient software In this second volume of the Write Great Code series you ll learn How to analyze the output of a compiler to verify that your code does indeed generate good machine code The types of machine code statements that compilers typically generate for common control structures so you can choose the best statements when writing HLL code Just enough 80x86 and PowerPC assembly language to read compiler output How compilers convert various constant and variable objects into machine data and how to use these objects to write faster and shorter programs NEW TO THIS EDITION COVERAGE OF Programming languages like Swift and Java Code generation on modern 64 bit CPUs ARM processors on mobile phones and tablets Stack based architectures like the Java Virtual Machine Modern language systems like the Microsoft Common Language Runtime With an understanding of how compilers work you ll be able to write source code that they can translate into elegant machine code That understanding starts right here with Write Great Code Volume 2 Thinking Low Level Writing High Level *Compiler Construction* Kenneth C.
