   Information Security Management Handbook, Fifth Edition Harold F. Tipton,Micki Krause,2003-12-30 *PETSc for Partial Differential Equations: Numerical Solutions in C and Python* Ed Bueler,2020-10-22 The Portable Extensible Toolkit for Scientific Computation PETSc is an open source library of advanced data structures and methods for solving linear and nonlinear equations and for managing discretizations This book uses these modern numerical tools to demonstrate how to solve nonlinear partial differential equations PDEs in parallel It starts from key mathematical concepts such as Krylov space methods preconditioning multigrid and Newton s method In PETSc these components are composed at run time into fast solvers Discretizations are introduced from the beginning with an emphasis on finite difference and finite element methodologies The example C programs of the first 12 chapters listed on the inside front cover solve mostly elliptic and parabolic PDE problems Discretization leads to large sparse and generally nonlinear systems of algebraic equations For such problems mathematical solver concepts are explained and illustrated through the examples with sufficient context to speed further development PETSc for Partial Differential Equations addresses both discretizations and fast solvers for PDEs emphasizing practice more than theory Well structured examples lead to run time choices that result in high solver performance and parallel scalability The last two chapters build on the reader s understanding of fast solver concepts when applying the Firedrake Python finite element solver library This textbook the first to cover PETSc programming for nonlinear PDEs provides an on ramp for graduate students and researchers to a major area of high performance computing for science and engineering It is suitable as a supplement for courses in scientific computing or numerical methods for differential equations   Logic Gates, Circuits, Processors, Compilers and Computers Jan Friso Groote,Rolf Morel,Julien Schmaltz,Adam Watkins,2021-08-18 This undergraduate textbook first introduces basic electronic circuitry before explaining more advanced elements such as the Arithmetic Logic Unit sequential circuits and finally microprocessors In keeping with this integrated and graduated approach the authors then explain the relationship to first assembly programming then higher level languages and finally computer organisation Authors use the Raspberry Pi and ARM microprocessors for their explanations The material has been extensively class tested at TU Eindhoven by an experienced team of lecturers and researchers This is a modern holistic treatment of well established topics valuable for undergraduate students of computer science and electronics engineering and for self study The authors use the Raspberry Pi and ARM microprocessors for their explanations

   Solution of Partial Differential Equations on Vector and Parallel Computers James M. Ortega,Robert G. Voigt,1985-01-01 This volume reviews in the context of partial differential equations algorithm development that has been specifically aimed at computers that exhibit some form of parallelism Emphasis is on the solution of PDEs because these are typically the problems that generate high computational demands The authors discuss architectural features of these computers insomuch as they influence algorithm performance and provide insight into algorithm characteristics that allow

effective use of hardware   *Legal Protection for Computer-Implemented Inventions* Sabine Kruspig,Claudia Schwarz,2016-04-24 As a result of the incorporation of computer software into countless commercial and industrial products the patentability of software has become a vital issue in intellectual property law This indispensable book provides an overview on the current status of computer implemented inventions in patent law across Europe and major jurisdictions worldwide A hugely practical field research tool with guidance based on case law it examines the major hurdles in each particular country and describes the best practice to be adopted Clearly showing how enforceable software patent applications can be competitively drafted and how a patent portfolio for computer implemented inventions can be established in several countries without spending money unnecessarily on problematic examination proceedings this book covers such issues and topics as the following claim categories for patent applications sufficient level of abstraction breadth of the claimed invention fundamental terms of computing and terminological traps probability for patents dependent on software application areas and patents in core areas of computing With separate chapters for the key countries Germany the United Kingdom France the United States China Korea Japan India and the European Patent Office the legal situation for computer implemented inventions in each country or region this book includes guidance on prosecution under national law analyses of relevant court decisions practice checklists and an outlook on future developments The authors describe claim formulation based on actual cases and on principles of computer science in order to show what might be or might not be patentable in each jurisdiction With this incomparable resource patent attorneys and patent professionals in companies will get a basis for making decisions about the most appropriate jurisdictions in which to file patent applications This book will also be of great value to computer professionals who are affected by the protection of software or who are actively involved in the protection of software by patent law   Ubiquitous Communications and Network Computing Navin Kumar,M. Vinodhini,Ranga Rao Venkatesha Prasad,2021-07-05 This book constitutes the refereed proceedings of the 4th International Conference on Ubiquitous Communications and Network Computing UBICNET 2021 held in March 2021 Due to COVID 19 pandemic the conference was held virtually The 17 full papers were selected from 59 submissions and are basically arranged in different sessions on 5G networks millimeter wave communication systems and emerging applications quantum communication IoT and emerging applications data analytics and cloud computing artificial neural network machine learning and emerging applications   Computer Architecture '97 Ronald Pose,1997-04-01 The Australasian Computer Architecture Conferences were established in recognition of the fundamental reliance of all computer systems on the integrity capability and performance of the underlying computer architecture ACAC 97 held in February 1997 in Sydney Australia was the second in this series and attracted authors from Singapore Hong Kong Korea Sweden New Zealand Spain China the United States of America and Australia This volume contains a selection of 21 research papers the best and most interesting of those presented at the conference highlighting technologies to increase processor performance asynchronous processor designs
