Friction

1. A crate filled with delicious junk food rests on a horizontal floor. Only gravity and the support force of the floor act on it, as shown by the vectors for weight W and normal force n .
 - a. The net force on the crate is **(zero)** (greater than zero).
 - b. Evidence for this is **no acceleration**.

2. A slight pull P is exerted on the crate, not enough to move it.
 - a. The force of friction f acting on the crate is (less than) **(equal to)** (greater than) P .
 - b. The net force on the crate is **(zero)** (greater than zero).

3. Pull P is increased until the crate begins to move. It is pulled so that it moves with constant velocity across the floor.
 - a. Friction f is (less than) **(equal to)** (greater than) P .
 - b. Constant velocity means acceleration is **(zero)** (greater than zero).
 - c. The net force on the crate is (less than) **(equal to)** (greater than) zero.

4. Pull P is further increased and is now greater than friction f .
 - a. The net force on the crate is (less than) (equal to) **(greater than)** zero.
 - b. The net force acts toward the right, so acceleration acts toward the (left) **(right)**.

5. If the pulling force P is 150 N and the crate doesn't move, what is the magnitude of f ? 150 N
6. If the pulling force P is 200 N and the crate doesn't move, what is the magnitude of f ? 200 N
7. If the force of sliding friction is 250 N, what force is necessary to keep the crate sliding at constant velocity? 250 N
8. If the mass of the crate is 50 kg and sliding friction is 250 N, what is the acceleration of the crate when the pulling force is 250 N? 0 m/s² 300 N? 1 m/s² 500 N? 5 m/s²

Compendium of Neurosymbolic Artificial Intelligence Md Kamruzzaman Sarker, Aaron Eberhart, 2023-08-15. If only it were possible to develop automated and trainable neural systems that could justify their behavior in a way that could be interpreted by humans like a symbolic system. The field of Neurosymbolic AI aims to combine two disparate approaches to AI: symbolic reasoning and neural or connectionist approaches such as Deep Learning. The quest to unite these two types of AI has led to the development of many innovative techniques which extend the boundaries of both disciplines. This book *Compendium of Neurosymbolic Artificial Intelligence* presents 30 invited papers which explore various approaches to defining and developing a successful system to combine these two methods. Each strategy has clear advantages and disadvantages, with the aim of most being to find some useful middle ground between the rigid transparency of symbolic systems and the more flexible yet highly opaque neural applications. The papers are organized by theme, with the first four being overviews or surveys of the field. These are followed by papers covering neurosymbolic reasoning, neurosymbolic architectures, various aspects of Deep Learning, and finally two chapters on natural language processing. All papers were reviewed internally before publication. The book is intended to follow and extend the work of the previous book *Neurosymbolic artificial intelligence: The state of the art* (IOS Press, 2021), which laid out the breadth of the field at that time. Neurosymbolic AI is a young field which is still being actively defined and explored, and this book will be of interest to those working in AI research and development.
