Per Anhalter Durch Die Galaxis:

, Advanced Language Learning Heidi Byrnes, 2008-12-08 The editor and authors in this volume make a convincing case for focusing on advanced foreign language instruction. Importantly they invite consideration of this focus as an opportunity to re-examine conventional definitions of the target of instruction. In so doing readers also learn more about the theories highlighted in this volume and their capacity to enhance our understanding of advancedness and its development within an educational context. This book thus mediates between linguistic and language learning theories and educational practice modelling the very best of what applied linguistics has to offer. Diane Larsen Freeman, Professor of Education, University of Michigan. The reality of multicultural societies and globalization has increased the demand for language abilities that far exceed those that have typically been associated with communicative competence in a second language. This book examines the acquisition of advanced levels of ability in three parts: theoretical, descriptive and instructional. It moves beyond the traditional constraints of second language acquisition research by linking systemic functional linguistics and sociocultural theory. The contributors draw primarily on the work of Halliday, Vygotsky and Bakhtin as well as empirical data from the language classroom to suggest practical applications towards advanced literacy and linguistic competence. Advanced Language Learning will be of interest to academics researching systemic functional linguistics, second language acquisition and applied linguistics.
