Handbook of Food Processing Equipment George D. Saravacos, Athanasios E. Kostaropoulos, 2012-12-06 Recent publications in food engineering concern mainly food process engineering which is related to chemical engineering and deals primarily with unit operations and unit processes as applied to the wide variety of food processing operations Relatively less attention is paid to the design and operation of food processing equipment which is necessary to carry out all of the food processes in the food plant Significant technical advances on processing equipment have been made by the manufacturers as evidenced by the efficient modern food processing plants There is a need to relate advances in process engineering to process equipment and vice versa This book is an attempt to apply the established principles of transport phenomena and unit operations to the design selection and operation of food processing equipment Since food processing equipment is still designed empirically due to the complexity of the processes and the uncertainty of food properties description of some typical industrial units is necessary to understand the operating characteristics Approximate values and data are used for illustrative purposes since there is an understandable lack of published industrial data

Thermophysical Properties of Chemicals and Hydrocarbons Carl L. Yaws, 2008-12-11 Carl Yaws here presents over 7 800 organic and inorganic chemicals and hydrocarbons Spanning gases liquids and solids and covering all critical properties including acentric factor density enthalpy of vaporization and surface tension this volume represents more properties on more chemicals than any single work of its kind from C1 to C100 organics and Ac to Zr inorganics Designed and formatted for field lab or classroom usage it gives the reader unparalleled access to invaluable data
