time Manage production among facilities and exchange production data and status information as a routine basis of business Acquisitions and mergers have left many enterprises with a legacy of varied cultures resources and processes that must be reshaped into a single integrated whole Increasing pressures from global competition force enterprises to become cost effective high quality providers to traditional customers and push them to develop new markets and product lines Nearly every enterprise needs to make the transition to a globally interdependent business paradigm Totally Integrated Enterprises A Framework and Methodology for Business and Technology Improvement gives you the key definitions that allow you to understand and communicate with vendors consultants and experts in the field Using the techniques in this book you will see the results so often promised but not realized from technology

Knowledge Sharing in the Integrated Enterprise

Peter Bernus, Mark Fox, 2005-09-20 Enterprise Architects in their endeavor to achieve Enterprise Integration have limited guidance on how best to use Enterprise Models and Modeling Tools to support their practice It is widely recognized that the practice of engineering enterprises needs a number of models but how to maintain the relation between these models with ease is still a problem Model interoperability is an issue on multiple counts How to interchange models between enterprise modeling tools How to maintain the interdependencies between models whether they describe the enterprise on the same level but from different points of view or from the same point of view but on different levels of abstraction and granularity How to maintain a coherent and evolving set of enterprise models in support of continuous change processes How to use and reuse enterprise models as a knowledge resource The answers to these questions are of great importance to anyone who is implementing ISO9001 2000 requirements whether through using enterprise architecture practice or not although it can be argued that a well executed architecture practice should satisfy ISO9001 without additional effort This volume attacks the problem on three fronts 1 Authors working in international standardisation and tool development as well as in enterprise modeling research present the latest developments in semantic integration 2 Authors who are practitioners of or conducting active research in enterprise architecting methodologies give an account on the latest developments and strategic directions in architecture frameworks and methodologies 3 Authors who use or develop information integration infrastructures present best practice and future trends of this aspect of enterprise integration Chapters of this book include contributions to the International Conference on Enterprise Integration and Modelling Technology ICEIMT 04 and those presented at the Design of Information Infrastructure Systems for Manufacturing DIISM 04 Workshop While DIISM is traditionally oriented at supporting manufacturing practice the results have a far greater domain of applicability

Enterprise Systems Integration Diogo R. Ferreira,2013-12-04 The field of enterprise systems integration is constantly evolving as every new technology that is introduced appears to make all previous ones obsolete Despite this continuous evolution there is a set of underlying concepts and technologies that have been gaining an increasing importance in this field Examples are asynchronous messaging through message queues data and application adapters based on XML and Web services the principles associated with the service oriented architecture SOA service composition orchestrations and advanced mechanisms such as correlations and long running transactions Today these concepts have reached a significant level of maturity and they represent the foundation over which most integration platforms have been built This book addresses integration with a view towards supporting business processes From messaging systems to data and application adapters and then to services orchestrations and choreographies the focus is placed on the connection between systems and business processes and particularly on how it is possible to develop an integrated application infrastructure in order to implement the desired business processes For this purpose the text follows a layered bottom up approach with application oriented integration at the lowest level followed by service oriented integration and finally completed by process oriented integration at the topmost level The presentation of concepts is accompanied by a set of instructive examples using state of the art technologies such as Java Message Service JMS Microsoft Message Queuing MSMQ Web Services Microsoft BizTalk Server and the Business Process Execution Language BPEL The book is intended as a textbook for advance undergraduate or beginning graduate students in computer science especially for those in an information systems curriculum IT professionals with a background in programming databases and XML will also benefit from the step by step description of the various integration levels and the related implementation examples
