Software Development's Jolt Award for the best book of 1994 in its first edition. Their most recent book is *Client Server Programming with Java and CORBA*. [Managing Client/server](#) Dolf Zantinge, Pieter Adriaans, 1996. Client server is a method by which information system programs and data are divided between a client computer and a server computer. Multiple clients make use of this server to request, store, and change data. Giving an overview of the management of client server databases, this work takes a management perspective rather than holding too in depth a discussion of technical aspects. The text covers system and network management, distributed databases, and data warehousing. [Object-oriented Client/server Internet Environments](#) Amjad Umar, 1997. For computer science courses focusing on distributed systems. This book systematically answers critical management and technical questions about the modern IT infrastructure in particular middleware. **Network Application Frameworks** Eric Greenberg, 1999. Network engineers, IS managers, and architects face an enormous challenge: how to integrate modern networking platforms and applications with legacy systems to create a single computing environment that efficiently, effectively, and securely serves an organization's needs. This long-awaited comprehensive book, written by a pioneer in the fields of networking and application development, is the guide for completing this formidable task. *Network Application Frameworks* provides a thorough exploration of major networking technologies and application development components. Enterprise-wide design, performance, security, reliability, and operational implications are just some of the topics covered in full detail. Using this book, network engineers will be able to more easily isolate and resolve problems in a network or application. IS managers will save valuable time and resources by following the author's strategies for optimizing integration and identifying trouble spots. Architects will find a wealth of knowledge to help them plan future systems such as information on designing networks and applications in tandem to simplify use, improve manageability, and reduce costs. Topics covered: **Proceedings of the ACM SIGPLAN--SIGSOFT Workshop on Program Analysis for Software Tools and Engineering**, 1998. [Integration of Services into Workflow Applications](#) Pawel Czarnul, 2015-06-10. Describing state-of-the-art solutions in distributed system architectures, *Integration of Services into Workflow Applications* presents a concise approach to the integration of loosely coupled services into workflow applications. It discusses key challenges related to the integration of distributed systems and proposes solutions both in terms of the **Distributed Application Development with PowerBuilder 6**. Michael Barlotta, 1999. Covering PowerBuilder DPB in great detail, going over various concepts and components that are involved with building an application and making it available over the network, this resource begins with an explanation of the main thrust behind distributed computing, followed by the steps of creating a simple application. An exploration of how PowerBuilder can be used in distributed solutions, both with and without using DPB, is also provided. **The Publishers Weekly**, 1997.
