

Design for Manufacturability Guidelines – Sheetmetal

This is an example of DFM guidelines for sheetmetal fabrication.

Bends

Bends should be toleranced plus or minus one-half degree at a location adjacent to the bends.
For the ease of manufacturing, multiple bends on the same plane should occur in the same direction.
Avoid large sheet metal parts with small bent flanges.
In low carbon steel sheet metal, the minimum radius of a bend should be one-half the material thickness or 0.80 mm (0.03 inch), whichever is larger.

Counterbores

The minimum distance between two counterbores is eight times the material thickness.
The minimum distance from a counterbore to an edge is four times the material thickness.
The minimum distance from a counterbore to a bend is four times the material thickness plus the bend radius.

Countersinks

The maximum depth is 3.5 times the material thickness at an angle of the hardware.
A minimum of 50% contact between the hardware and the countersink is required.
The minimum distance between two countersinks is eight times the material thickness.
The minimum distance from one countersink and an edge is four times the material thickness.
The minimum distance from a countersink and a bend is four times the material thickness plus the bend radius.

Curls

The minimum radius is two times the material thickness with an opening to a minimum of one material thickness.
The minimum distance between a curl and the edge of a hole is the radius of the curl plus the material thickness.
The minimum distance a curl should be from an internal bend is six times the material thickness plus the radius of the curl.
The minimum distance a curl should be from an external bend is nine times the material thickness plus the radius of the curl.

Dimples

The maximum diameter should be six times the material thickness, and a maximum depth of one-half the inside diameter.
The minimum distance that a dimple should be from a hole is three times the material thickness plus the radius of the dimple.
The minimum distance that a dimple should be from the edge is four times the material thickness plus the inside radius of the dimple.
The minimum distance that a dimple should be from a bend is two times the material thickness plus the inside radius of the dimple plus the radius of the bend.
The minimum distance between one dimple and another is four times the material thickness plus inside radius of each dimple.

Tool and Manufacturing Engineers Handbook: Design for Manufacturability Thomas J. Drozda, Charles Wick, Philip Mitchell, Ramon Bakerjian, John T. Benedict, Raymond F. Veilleux, 1983 Addresses important topics of DFM including how it relates to concurrent engineering management issues getting started in DFM how to justify using DFM applying quality tools and how DFM is affecting computer technology and vice versa Covers topics starting with the creative thinking process to combining DFM with geometric dimensioning and tolerancing Also includes product design information that designers should know when committing pen to paper or mouse to mat *Design for Manufacturability*, 1993

Design for Manufacturability Handbook James G. Bralla, 1999 Offers a blueprint for various stages of the manufacturing process This handbook provides directions for solid and practical design including a quick check of do s and don ts as well as specific tips for developing the most producible design It also includes the details needed to forecast a successful design project *Design for Manufacturability Through Design-process Integration* Alfred Kwok-Kit Wong, Vivek K. Singh, 2007 Proceedings of SPIE present the original research papers presented at SPIE conferences and other high quality conferences in the broad ranging fields of optics and photonics These books provide prompt access to the latest innovations in research and technology in their respective fields Proceedings of SPIE are among the most cited references in patent literature

Handbook of Manufacturing Automation and Integration, 1990 **Design for Manufacturability** David M. Anderson, 2020-05-11 Achieve any cost goals in half the time and achieve stable production with quality designed in right the first time Design for Manufacturability How to Use Concurrent Engineering to Rapidly Develop Low Cost High Quality Products for Lean Production is still the definitive work on DFM This second edition extends the proven methodology to the most advanced product development process with the addition of the following new unique and original topics which have never been addressed previously These topics show you how to Cut cost from 1 2 to 1 10 in 9 categories with ways to remove that much cost from product charges and pricing Commercialize innovation starting with Manufacturable Research and learning from the new section on scalability you will learn how to design products and processing equipment to quickly scale up to any needed demand or desired growth Design product families that can be built on demand in platform cells that also mass customize products to order Make Lean production easier to implement with much more effective results while making build to order practical with spontaneous supply chains and eliminating forecasted inventory by including an updated chapter on Designing Products for Lean Production The author s 30 years of experience teaching companies DFM based on pre class surveys and plant tours is the foundation of this most advanced design process It includes incorporating dozens of proven DFM guidelines through up front concurrent engineering teamwork that cuts the time to stable production in half and curtails change orders for ramps rework redesign substituting cheaper parts change orders to fix the changes unstable design specs part obsolescence and late discovery of manufacturability issues at periodic design reviews This second edition

is for the whole product development community including Engineers who want to learn the most advanced DFM techniques Managers who want to lead the most advanced product development Project team leaders who want to immediately apply all the principles taught in this book in their own micro climate Improvement leaders and champions who want to implement the above and ensure that the company can design products and versatile processing equipment for low volume high mix product varieties Designing half to a tenth of cost categories can avoid substituting cheap parts which degrades quality and encourages standardization and spontaneous supply chains which will encourage Lean initiatives Using cellular manufacturing to shift production between lines for mixed production of platforms and build to order to offer the fastest order fulfillment can beat any competitors delivery time
