Designing And Managing The Supply Chain Simchi Levi :

Designing and Managing the Supply Chain David Simchi-Levi, Philip Kaminsky, Edith Simchi-Levi, 2022 Three years ago when the second edition of this text was published we mentioned our goal of building on the positive elements of the first edition and including what we had learned subsequently We are pleased to note that that revision was successful as with the first edition we received a tremendous response from adopters students executives and consultants Nevertheless new concepts have subsequently been developed technological changes continue at an ever increasing rate and we have discovered a variety of important new teaching approaches and concepts so the time is right for a newly revised edition The original edition of this book grew out of a number of supply chain management courses and executive education programs we taught at Northwestern University as well as numerous consulting projects and supply chain decision support systems we developed at LogicTools Since then we have continued teaching executive and regular courses both at Massachusetts Institute of Technology and at the University of California Berkeley and have continued to develop a variety of supply chain decision support tools These courses have spawned many innovative and effective supply chain education concepts The focus in these programs has always been on presenting in an easily accessible manner recently developed state of the art models and solution methods important in the design control and operation of supply chains Similarly the consulting projects and decision support systems developed by LogicTools have focused on applying these advanced techniques to solve specific problems faced by our clients In the last three years we have continued to add new models and techniques to these courses as they have been developed and we continued the process of integrating these approaches models and solution methods into frameworks so that students can better put these ideas into perspective Interest in supply chain management both in industry and in academia has grown rapidly over the past two decades and continues to grow A number of forces have contributed to this trend In the 90s many companies recognized that they have reduced manufacturing costs as much as practically possible Many of these companies discovered the magnitude of savings that can be achieved by planning and managing their supply chains more effectively Indeed a striking example in the 90s was Wal Mart s success which is partly attributed to implementing a new logistics strategy called cross docking At the same time information and communication systems were widely implemented and provide access to comprehensive data from all components of the supply chain In particular the influence of the Internet and e commerce on the economy in general and business practice in particular has been tremendous Changes are happening extremely fast and the scope of these changes is breathtaking For instance the direct business model employed by industry giants such as Dell Computers and Amazon com enables customers to order products over the Internet and thus allows companies to sell their products without relying on third party distributors or conventional stores Similarly the Internet has made a significant impact on business to business transactions and collaborations At the same time deregulation of the transportation industry has led to the development of a variety of

transportation modes and reduced transportation costs while significantly increasing the complexity of logistics systems

with its operations strategy Simchi Levi's rules regarding such issues as channels price product characteristics value added service procurement strategy and information technology transform operations and supply chain management from an undertaking based on gut feeling and anecdotes to a science
