*Development Economics: Theory, Practice, and Prospects* Thomas R. DeGregori, 2012-12-06 [Development Economics](#) D. Amutha, 2020 **Development Economics** Julie Schaffner, 2013-10-07 *Development Economics Theory Empirical Research and Policy Analysis* by Julie Schaffner teaches students to think about development in a way that is disciplined by economic theory informed by cutting edge empirical research and connected in a practical way to contemporary development efforts It lays out a framework for the study of developing economies that is built on microeconomic foundations and that highlights the importance in development studies of transaction and transportation costs risk information problems institutional rules and norms and insights from behavioral economics It then presents a systematic approach to policy analysis and applies the approach to policies from around the world in the areas of targeted transfers workfare agricultural markets infrastructure education agricultural technology microfinance and health [Theory and Practice in Development Economics](#) Michele Alacevich, 2017 After World War II a new disciplinary field called development economics emerged as economists began to shape specific theories in order to address the practical problems they were facing in less developed countries Theory arose out of practice in the sense that the shaping of development economics theories involved learning in the field and developing new analyses and concepts out of this experience not just taking ideas from other fields and applying them in a different context During the 1950s the discipline prospered but by the 1960s it faced a crisis for it came to be recognized that the experience of developing countries did not fit the models of development that had been constructed and many of the main policy prescriptions had clearly failed The result was a complete reorientation of the discipline in which

neoclassical economics hitherto believed irrelevant to developing countries became central. The field started to apply systematically tools such as cost benefit analysis and input output analysis it also became much more formalized than it was before. The result of this transformation was a much more conventional application of theory to the problem of development. This paper discusses the oscillating nature of development economics. The tension between theory and practice has never gone away.

*Green National Accounting in Theory and Practice* Peter Birch Sørensen, 2025-06-13. This book explains the theoretical and empirical foundations for constructing a measure of a country's Green GDP and how this measure relates to the conventional GDP. Opening with an overview of the academic literature on green national accounting, the first chapter sets up an analytical model of the interaction between a small open economy and the environment to derive a theoretically founded measure of the economy's Green Net National Income Green GDP. The book then illustrates how the theory can be applied in practice to produce a time series for the evolution of Denmark's Green GDP and its various components with an emphasis on the environment over the last thirty years. As far as possible the data used in the calculations were constructed in accordance with international statistical guidelines. Therefore the careful explanation of the methodology which is outlined in the book can be applied to other countries using comparable data. This book will be of significant interest to scholars in the field of environmental economics and statisticians and practitioners working on green national accounting.

**Epistemics of Development Economics** Kofi Kissi Dompere, Manzur Ejaz, 1995-08-22. The effective use of development economic theories in practice is limited, the authors contend, by the lack of explicit criterion for judging their scientific content. The directional progress of critical research and teaching is also constrained by this deficiency. This study advances a meta theory designed to assist in evaluating the scientific validity of theories in economic development and how these theories can be improved to assist social practice. Using this model, the study then examines existing theories, dividing them into explanatory and prescriptive theories. The explanatory theories include the stage based theories of Marx, Schumpeter and Rostow and factor based theories including capital based, human capital based and technology based theories. The prescriptive theories include explanatory theory based prescriptions, interventionist prescriptive theories and theories of economic planning. In conclusion, the authors contend that modern analysis of development economics is plagued with logical ills, misleading notions and a weak theoretical structure that lacks scientific appeal. Most of the theories, except for those of Marx and Schumpeter, neglect an analysis of the mechanism of change.
