

## Step 1: Find the probability of each individual event.

$$P(\text{ace}) = \frac{4}{52} = \frac{1}{13}$$

There are 4 aces in a deck of cards  
There are 52 outcomes in a deck of cards

$$P(\text{spade}) = \frac{13}{52} = \frac{1}{4}$$

There are 13 spades in a deck of cards  
There are 52 outcomes in a deck of cards

$$P(4) = \frac{4}{52} = \frac{1}{13}$$

There are 4 fours in a deck of cards  
There are 52 outcomes in a deck of cards

## Step 2: Multiply the probabilities of each individual event.

$$P(\text{ace and spade and 4}) = \frac{1}{13} \cdot \frac{1}{4} \cdot \frac{1}{13} = \frac{1}{676}$$

The probability of drawing an ace, replacing it, and then drawing a spade, replacing it, and then drawing a 4 is 1/676.

## Difficult Probability Problems And Solutions:

**Fifty challenging problems in probability with solutions** Frederick Mosteller, **Statistics: Problems And Solution (Second Edition)** Eryl E Bassett, J Mike Bremner, Byron Jones, Byron J T Morgan, P M North, Ian T Jolliffe, 2000-06-27 Originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions The level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics At this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives The solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves The notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems *The American Mathematical Monthly*, 1902 Includes section Recent publications Probability Problems and Solutions Stefan Hollos, J. Richard Hollos, 2013-04 This book will help you learn probability in the most effective way possible through problem solving It contains over 200 problems in discrete probability with detailed solutions for each Most of the problems require very little mathematical background to solve A good grasp of algebra is all that is required Some prior exposure to probability or combinatorics will make things easier but the book has enough introductory material to cover any deficiency in those areas There are sections that review the basics of discrete probability and combinatorics There are also sections on advance topics in discrete probability that are helpful in solving the more difficult and interesting problems The problems range widely in difficulty and variety They begin very easy and increase in difficulty as you go The first few are warm up problems to wake up your probability neurons and get you ready for what's to come Some of the later problems can be quite challenging and may take some effort to solve There are problems on letters and words dice and coin problems card problems sports problems Bayesian problems collection problems birthday problems and many many more The almost endless variety of probability problems is one of the things that makes them so stimulating and fun to solve
