

28.2. Three methods for improving resolution are: (1) Adjustment of k_a' and k_b' by employing a multi-component mobile phase and varying the ratio of the components to find an optimal mixture, (2) variation in the chemical composition of the solvent system in such a way as to make α larger, and (3) by employing a different packing in which α is greater.

28.3. In partition chromatography k' is conveniently varied using a two or more component solvent system and varying the ratio of the solvents.

28.4. In gas-liquid chromatography α is generally varied through the choice of column packing. For liquid chromatography both column packing and chemical composition of the mobile phase can be varied to yield better α values.

28.5. In adsorption chromatography on an alumina packing it is generally best to increase the polarity of the mobile phase as the elution proceeds. Thus the ratio of acetone to benzene should be increased as elution proceeds.

28.13. In ion-exchange chromatography, ions are separated based on their exchange rate with the stationary phase. With size-exclusion chromatography, neutral molecules are separated based on the size of the molecule.

28.20. Because the peak widths are equal, we can assume that $R_s = \frac{T_r(b) - T_r(a)}{W}$, which allows us to use equation 26-26, which is

$$N = 16R_s^2 \left(\frac{\alpha}{\alpha - 1} \right)^2 \left(\frac{1 + k_B}{k_B} \right)^2$$

To find α , we need to find k_B and k_A , using the following equation

$$k = \frac{T_r - T_m}{T_m}$$

and converting the retention times to either all seconds or all minutes, giving the following values:

$k(a)$	$k(b)$	α

Analytical Chemistry John H. Kennedy, 1984 *Problem Solving in Analytical Chemistry* Denise Rafferty, Sara Sleigh, 1998 The development of problem solving skills is fast becoming a key element in many present day chemistry courses Problem Solving in Analytical Chemistry is the first in a series of publications produced by the Royal Society of Chemistry aimed at enhancing these skills The book features a variety of problems broadly based in analytical chemistry developed in collaboration with universities and incorporating industrial ideas Each of the 55 problems is complete with a solution and a guide for tutors With subject matter ranging from gravimetric analysis to interpretation of spectroscopic data the content is suitable for use as group exercises in tutorials or for individual learning Trialled in universities across the UK pre publication students and lecturers will find Problem Solving in Analytical Chemistry an essential aid to a degree course Problems and Exercises in Analytical Chemistry A. Hamilton, 2008-11 CALCULATIONS OF ANALYTICAL CHEMISTRY by LEICESTER F HAMILTON S B and STEPHEN G SIMPSON Originally published in 1922 PREFACE The title of this book has been changed from Calculations of Quantitative Chemical Analysis to Calculations of Analytical Chemistry because the subject matter has been expanded to cover the stoichiometry of both qualitative and quantitative analysis In order to include calculations usually covered in courses in qualitative analysis some rearrangements of material have been made new sections have been added and chapters dealing with equilibrium constants and with the more elementary aspects of analytical calculations have been considerably expanded Al together the number of sections has been increased from 78 to 114 and the number of problems from 766 to 1 032 The greater part of the book is still devoted to the calculations of quantitative analysis Short chapters on conductometric and amperometric titrations and a section on

calibration of weights have been added and many other changes and additions have been made at various points in the text A section reviewing the use of logarithms has been inserted and a table of molecular weights covering most of the problems in the book is included in the Appendix It is felt that every phase of general analytical chemistry is adequately covered by problems both with and without answers and that most of the problems require reasoning on the part of the student and are not solved by simple substitution in a formula LEICESTER F HAMILTON STEPHEN G SIMPSON CAMBRIDGE MASS
