*Antenna Theory and Design* Warren L. Stutzman, Gary A. Thiele, 1981-04-21 Provides a solid understanding of the underlying theories and principles as well as the information necessary for designing and building many classes of antennas Covers the topic from three angles antenna fundamentals antenna techniques and the design of various antenna types Discusses such specialized modern techniques as moment methods hi frequency techniques and antenna synthesis Includes several computer program source listings in FORTRAN

**Antenna Theory and Design** Warren L. Stutzman, Gary A. Thiele, 2012-10-16 This introduction to antenna theory and design is suitable for senior undergraduate and graduate courses on the subject Its emphasis on both principles and design makes it perfect both as a college text and as a reference to the practicing engineer The final three chapters on computational electromagnetics for antennas are suitable for graduate work Stutzman provides more of a pedagogical approach than its competitors placing a greater emphasis on a concise easily understandable presentation of fundamentals and applications as well as computational methods This third edition has been completely revised New topics have been added on antennas for personal and mobile communications and base station antennas Coverage of systems applications of antennas arrays microstrip and low profile antennas and antenna measurements has been updated and expanded including more examples applied to modern applications

**Low Power UWB CMOS Radar Sensors** Hervé Paulino,Joao Goes,Adolfo Steiger Garção,2008-04-30 Low Power UWB CMOS Radar Sensors deals with the problem of designing low cost CMOS radar sensors The radar sensor uses UWB signals in order to obtain a reasonable target separation capability while maintaining a maximum signal frequency below 2 GHz This maximum frequency value is well within the reach of current CMOS technologies The use

of UWB signals means that most of the methodologies used in the design of circuits and systems that process narrow band signals can no longer be applied Low Power UWB CMOS Radar Sensors provides an analysis between the interaction of UWB signals the antennas and the processing circuits This analysis leads to some interesting conclusions on the types of antennas and types of circuits that should be used A methodology to compare the noise performance of UWB processing circuits is also derived This methodology is used to analyze and design the constituting circuits of the radar transceiver In order to validate the design methodology a CMOS prototype is designed and experimentally evaluated *American Book Publishing Record* ,1999 **Proceedings** Lawrence P.
