Climatology:

Encyclopedia of World Climatology John E. Oliver, 2008-04-23 Today given the well publicized impacts of events such as El Niño there is an unequalled public awareness of how climate affects the quality of life and environment. Such awareness has created an increasing demand for accurate climatological information. This information is now available in one convenient accessible source: the *Encyclopedia of World Climatology*. This comprehensive volume covers all the main subfields of climatology, supplies information on climates in major continental areas, and explains the intricacies of climatic processes. The level of presentation will meet the needs of specialists, university students, and educated laypersons. A successor to the 1986 *Encyclopedia of Climatology*, this compendium provides a clear explanation of current knowledge and research directions in modern climatology. This new encyclopedia emphasizes climatological developments that have evolved over the past twenty years. It offers more than 200 informative articles prepared by 150 experts on numerous subjects ranging from standard areas of study to the latest research studies. The relationship between climatology and both physical and social science is fully explored, as is the significance of climate for our future well-being. The information is organized for speedy access. Entries are conveniently arranged in alphabetical order, thoroughly indexed, and cross-referenced. Every entry contains useful citations to additional source materials. The Editor, John E. Oliver, is Professor Emeritus at Indiana State University. He holds a B.Sc. from London University and a MA and Ph.D. from Columbia University. He taught at Columbia University and then at Indiana State, where he was formerly Chair of the Geography-Geology Department and Associate Dean, College of Arts and Sciences. He has written many books and journal articles in *Climatology*, *Applied Climatology*, and *Physical Geography*.

Climatology Robert V. Rohli, Anthony J. Vega, 2013-12-09 Ideal for the upper level undergraduate or introductory level graduate course on climatology, the thoroughly updated third edition provides students with a comprehensive foundation of the climatic system. It begins with an overview of climatology basics, including a discussion on climatology versus meteorology and an introduction to the atmosphere. Also included in these introductory chapters is a discussion on air-sea interactions to assist readers in understanding this critical aspect of the earth-atmosphere system. Using a regional approach, discussions progress to more advanced concepts such as microscale processes, climatic water balance, global atmospheric circulation, climatic classification, the spatial variability of climates, and much more. The comprehensive Third Edition provides up-to-date data through graphs and maps and introduces new key terms that have crept into the science and public discourse. **The Climatology and Physical Features of Maryland** Maryland State Weather Service, 1894 Handbook of Climatology Julius von Hann, Robert DeCourcy Ward, 1908 **Climatology and mineral waters of the United States** Agrippa Nelson Bell, 1885 **Meteorology and Climatology of the Great Valleys and Foothills of California, for from Fifteen to Thirty-six Years** California.
