Closed-loop Geothermal Systems Fred Jones,1994 **Geothermal Heat Pumps: Installation Guide** Stephen K. Ewings,2008-10 **An Introduction to Thermogeology** David Banks,2012-08-13 This authoritative guide provides a basis for understanding the emerging technology of ground source heating and cooling It equips engineers geologists architects planners and regulators with the fundamental skills needed to manipulate the ground s huge capacity to store supply and receive heat and to implement technologies such as heat pumps to exploit that capacity for space heating and cooling The author has geared the book towards understanding ground source heating and cooling from the ground side the geological aspects rather than solely the building aspects He explains the science behind thermogeology and offers practical guidance on different design options An Introduction to Thermogeology ground source heating and cooling is aimed primarily at professionals whose skill areas impinge on the emerging technology of ground source heating and cooling They will be aware of the importance of the technology and wish to rapidly acquire fundamental theoretical understanding and design skills This second edition has been thoroughly updated and expanded to cover new technical developments and now includes end of chapter study questions to test the reader s understanding *Fundamentals of Geothermal Heat Pump Systems* Louis Lamarche,2023-10-05 *Fundamentals of Geothermal Heat Pump Systems Design and Application* is written for upper level undergraduate and graduate courses in renewable energy and heat transfer This classroom tested text covers ground heat exchanger modeling secondary loop ground source system design pumping energy thermal response testing commercial building applications and horizontal and groundwater ground heat exchangers The book is oriented to practical applications including the economic analysis of ground source heat pump GSHP systems but more theoretical sections are provided covering research related geothermal applications Chapters on heat transfer fundamentals and heat pump concepts are included for readers less familiar with thermal engineering concepts A chapter covering the economic analysis of GSHP systems is also included All of the examples and problems in the book are solved using the open source Python programming language Thebook will provide students in geothermal energy courses with a solid understanding of the subject It will also be a valuable reference for professionals working in the field of renewable energy **Geothermal Energy** Ingrid Stober,Kurt Bucher,2021-05-24 The internal heat of the planet Earth represents an inexhaustible reservoir of thermal energy known as Geothermal Energy The 2nd edition of the book covers the geologic and technical aspects of developing all forms of currently available systems using this renewable green energy The book presents the distribution and transport of thermal energy in the Earth Geothermal Energy is a base load energy available at all times independent of climate and weather The text treats the efficiency of diverse shallow near surface installations and deep geothermal systems including hydrothermal and petrothermal techniques and power plants in volcanic high enthalpy fields The book also discusses environmental aspects of utilizing different forms of geothermal energy including induced seismicity noise pollution and gas release to the atmosphere

Chapters on hydraulic well tests chemistry of deep hot water scale formation and corrosion development of geothermal probes well drilling techniques and geophysical exploration complete the text This book for the first time covers the full range of utilization of Geothermal Energy

Cold Climate HVAC 2018 Dennis Johansson,Hans Bagge,Åsa Wahlström,2018-12-12 This volume presents the proceedings of the 9th Cold Climate HVAC conference which was held in Kiruna Sweden in 2018 The conference highlighted key technologies and processes that allow scientists designers engineers manufacturers and other decision makers in cold climate regions to achieve good indoor environmental quality IEQ with a minimum use of energy and other resources The conference addressed various technical economic and social aspects of buildings and HVAC systems in new and renovated buildings This proceedings volume gathers peer reviewed papers by a diverse and international range of authors and showcases perspectives and practices in cold climate building design from around the globe The following major aspects which include both fundamental and theoretical research as well as applications and case studies are covered 1 Energy and power efficiency and low energy buildings 2 Renovating buildings 3 Efficient HVAC components 4 Heat pumps and geothermal systems 5 Municipal and city energy systems 6 Construction management 7 Buildings in operation 8 Building simulation 9 Reference data 10 Transdisciplinary connections and social aspects 11 Indoor environments and health 12 Moisture safety and water damage 13 Codes regulations standards and policies and 14 Other aspects of buildings in cold climates

Renewable Energy - Volume 2: Wave, Geothermal, and Bioenergy Abdul Ghani Olabi,2023-10-08 Renewable Energy Volume 2 Wave Geothermal and Bioenergy Definitions Developments Applications Case Studies and Modelling and Simulation is the next volume in this comprehensive resource for those wanting an extensive reference on these specialized technologies Providing a structured approach to the emerging technologies and advances in implementation of Geothermal and Biofuels systems this reference addresses geothermal and biofuel coverage in a logical and accessible arrangement From definitions to developments in technology and applications to case studies modelling examples and lifecycle analysis this book considers the most requested and desirable practical elements of geothermal and biofuel technologies from an applied perspective This coordinated approach allows for stand alone accessible and functioning chapters dedicated to particular energy sources This is a suitable reference for students and post doctoral research fellows working on projects related to renewable energy sustainability and energy system design Includes in depth and up to date explanations for the latest developments in Marine Geothermal and Biofuels Uniquely thematically arranged with structured content for accessible and usable reference material Extensively illustrated and supported by multimedia components including short videos and slide shows for greater examples and case studies
