Computer Transformation Of Digital Images And Patterns:

Computer Transformation Of Digital Images And Patterns Zi-cai Li, Tien Dai Bui, Yuan Yan Tang, Ching Yee Suen, 1989-11-01 This book is concerned with linear and nonlinear transformations of digitized images and patterns Transformation models include linear quadratic cubic bilinear biquadratic bicubic Coons model and other nonlinear forms such as harmonic projective and perspective transformations Discrete techniques have been developed to realize both forward and inverse transformations The latter can be applied to normalize distorted images and to enhance the pattern recognition process Efficient algorithms such as the splitting shooting methods and splitting integrating methods have been developed and analysed in this book for the first time Graphical examples are given and compared with existing algorithms This book is of interest to researchers in the areas of pattern recognition character recognition image processing computer vision computer graphics and other related fields *A Digital Optical Cellular Image Processor* Kung-Shiuh Huang, 1990 The research detailed in this book has been motivated by the search for a simple parallel digital optical architecture for image processing The development of a simple unified consistent theory of parallel binary image processing is described and its implementation on digital optical processors is considered Both theoretical and experimental work are included and both algorithmic and architectural designs are covered Also presented are the experimental results of the implementation of a prototype Digital Optical Cellular Image Processor DOCIP system used to demonstrate the concept of the DOCIP architecture
