### E-Cubed Concept Revisited

In my inaugural editorial of the *Journal of Sustainable Energy Engineering (JSEE)* in 2014, I introduced the “E-cubed” concept. This highlights the significance of the need for paying attention to Energy, Environment and Economy simultaneously, in connection with energy sustainability. Since then, we have published many basic research and application papers in all of these areas. To ensure depth of coverage, we also introduced special issues of the Journal, focusing on a particular topic at least once a year. In addition, we are maintaining the breadth of E-Cubed coverage. We explore the interactions among the three pillars of energy sustainability. We are also giving higher priority to articles that deal with the intersections among the components of e-cubed trilogy.

The unique multi-disciplinary theme of JSEE allows publication of new and cutting-edge processes and technologies across all areas of energy production, transportation, and transmission, including fossil fuels and renewable energy, as well as complementary topics such as water resources and energy infrastructure safety. More importantly, JSEE provides an ideal platform to report on the technical advances and scientific findings, exploring the key aspects of intersection of energy with the economy and environment. I am a true believer in the fact that most important advances occur when we delve into the edges and intersections of different disciplines. JSEE provides an effective forum to accomplish this objective.

While we will continue our main objective of publishing quality original papers, we also want to help reflect a wider spectrum of views. To create a vibrant forum for debate on the most pressing issues, I invite our distinguished editorial board members and our readers to volunteer writing editorials for the JSEE. We are also starting a new category of publication referred to as “Opinion Papers”. This is to encourage more extensive coverage of discussions on the important E-Cubed issues and to deal with many challenging problems from both scientific, engineering, and technical viewpoints.

**Cervix Cancer Screening** IARC Working Group on the Evaluation of Cancer-Preventive Strategies, International Agency for Research on Cancer, 2005. Cervical cancer is still one of the most common forms of cancer among women despite the success of screening for precursors of the disease using the widespread cytological procedure the Papanicolaou or Pap test. This volume reviews what is known about the occurrence, natural history and causes of cervical cancer before describing the established methods and newer variants and approaches for screening that are now being introduced, tested or investigated. Based on an international meeting of experts, the volume concludes with their evaluation of the evidence on the efficacy of screening for cervical cancer by the various techniques as well as their relative appropriateness depending on the resources available and competing priorities. It also provides recommendations for the public health implementation of screening including the frequency of screening and the age groups that should constitute the target population and the identification of areas for further research.

**International Futures** Barry B. Hughes, 2019-03-20. *International Futures: Building and Using Global Models* extensively covers one of the most advanced systems for integrated long term global and large scale forecasting analysis available today, the International Futures (IFs) system. Key elements of a strong long term global forecasting system are described, i.e. the formulations for the driving variables in separate major models and the manner in which these separate models are integrated. The heavy use of algorithmic and rule-based elements and the use of elements of control theory is also explained. Furthermore, the IFs system is compared and contrasted with all other major modeling efforts, also outlining the major benefits of the IFs system. Finally, the book provides suggestions on how the development of forecasting systems might most productively proceed in the coming years. Helps readers understand the IFs system not at a detailed equation and technical level but in terms of the important decisions made that dominate the structure and long term behavior. Presents information on the universe of long term global forecasting systems, key decisions made and the range of similarities and differences in the systems. Covers the relationship between long term forecasts in a variety of global issues and the forecasting systems and assumptions that underly them, essential information for forecast consumers.
