4. Branching Statements and Program Design

4.1 (a) false (0) (b) false (0) (c) The first term (17 – pi < 15) is true (1), and the second term (pi < 3) is false (0), so the xor function is true (1). (d) The true is converted to 1, and the false is converted to 0, so the result of the expression true > false is true (1). (e) The expression (35 / 17) is 2.0588. Therefore, the expression – (35 / 17) is false (0), and the expression – – (35 / 17) is true (1). Since 1 ≠ 2.0588, the overall expression is false (0). (f) false (0) (g) true (1)

4.2 The if structure is:

```
% Convert to radians
theta_rad = theta * pi / 180;

% Calculate tangent
if abs(cos(theta_rad)) > 1E-20
    tan = sin(theta_rad) / cos(theta_rad)
else
    disp('Error: cos(theta) too small');
end
```

4.3 These statements will execute, but they will not produce the result that the programmer wanted. An if/elseif/else structure will take the *first* valid branch, and ignore all others. Thus, if the temperature is 105, the statement will display the message "Temperature normal" instead of the desired message. This problem can be fixed by restructuring the order of the statements. In addition, the structure would not print out a message if the temperature were exactly 97.5°. A corrected version of the statements is shown below.

```
if temp < 97.5
    disp('Temperature below normal');
```

Essentials of MATLAB Programming Stephen J. Chapman,2009 Teaches how to program using MATLAB as a technical programming language as well as teaching students the basics of computer programming Using top down design methodology this text encourages students to think about the proper design of a program before coding **Essentials of MATLAB Programming, Loose-Leaf Version** Stephen J. Chapman,2017-01-01 *MATLAB* KUMAR, S. SWAPNA,LENINA, S V B,2016-01-30 MATLAB Easy Way of Learning covers exactly what students need to know in an introductory course This comprehensive book helps reader in understanding all the aspects of MATLAB basics and applications in an easy way The authors explain concepts by balanced treatment of theoretical and practical concepts with easy to understand programming codes and executions The book is suitable for the postgraduate and undergraduate students of engineering and sciences streams KEY FEATURES Includes sufficient numbers of examples and illustrations Blends self contained and reader friendly approach for teaching the concepts related to Simulink Fuzzy Logic Neural Network and Signal and Image Processing Covers wide ideas of applications through systematic and sequentially planned organized chapters Introduces MATLAB functions and other special functions with the help of worked out programs Provides Summary of the presented features Review questions and Practice exercise at the end of each chapter that will reinforce the concepts Explains concepts with the help of screenshots of the MATLAB software Numerical Linear Algebra and Applications Biswa Nath Datta,2010-02-04 An undergraduate textbook that highlights motivating applications and contains summary sections examples exercises online MATLAB codes and a MATLAB toolkit All the major topics of computational linear algebra are covered from basic concepts to advanced topics such as the quadratic eigenvalue problem in later chapters **Signals and Systems (Edition 5.0)** Michael D. Adams,2022-12-31 This book is intended for use in teaching undergraduate courses on continuous time and or discrete time signals and systems in engineering and related disciplines It provides a detailed introduction to continuous time and discrete time signals and systems with a focus on both theory and applications The mathematics underlying signals and systems is presented including topics such as signal properties elementary signals system properties continuous time and discrete time linear time invariant systems convolution continuous time and discrete time Fourier series the continuous time and discrete time Fourier transforms frequency spectra and the bilateral and unilateral Laplace and z transforms Applications of the theory are also explored including filtering equalization amplitude modulation sampling feedback control systems circuit analysis Laplace domain techniques for solving differential equations and z domain techniques for solving difference equations Other supplemental material is also included such as a detailed introduction to MATLAB a review of complex analysis an introduction to partial fraction expansions an exploration of time domain techniques for solving differential equations and information on online video lecture content for material covered in the book Throughout the book many worked through examples are provided Problem sets are also provided for each major topic covered Signals and

Systems with MATLAB® and Simulink® Farzin Asadi,2023-12-01 This textbook provides a compact but comprehensive treatment that guides students to solve Signals and Systems problems using MATLAB Simulink Ideal as a hands on source for courses in Signals and Systems or Control Systems this text focuses on solving problems using market standard software corresponding to all key concepts covered in the classroom The author uses his extensive classroom experience to guide students toward deeper understanding of key concepts while they gain facility with software they will need to master for later studies and practical use in their engineering careers **Signals and Systems (Edition 6.0)** Michael D. Adams,2024-12-15 This book is intended for use in teaching undergraduate courses on continuous time and or discrete time signals and systems in engineering and related disciplines It provides a detailed introduction to continuous time and discrete time signals and systems with a focus on both theory and applications The mathematics underlying signals and systems is presented including topics such as signal properties elementary signals system properties continuous time and discrete time linear time invariant systems convolution continuous time and discrete time Fourier series the continuous time and discrete time Fourier transforms frequency spectra and the bilateral and unilateral Laplace and z transforms Applications of the theory are also explored including filtering equalization amplitude modulation sampling feedback control systems circuit analysis Laplace domain techniques for solving differential equations and z domain techniques for solving difference equations Other supplemental material is also included such as a detailed introduction to MATLAB a review of complex analysis an introduction to partial fraction expansions an exploration of time domain techniques for solving differential equations and information on online video lecture content for material covered in the book Throughout the book many worked through examples are provided Problem sets are also provided for each major topic covered **PSPICE and MATLAB for Electronics** John Okyere Attia,2010-06-23 Used collectively PSPICE and MATLAB are unsurpassed for circuit modeling and data analysis PSPICE can perform DC AC transient Fourier temperature and Monte Carlo analysis of electronic circuits with device models and subsystem subcircuits MATLAB can then carry out calculations of device parameters curve fitting numerical integration nume Signals and Systems (Edition 4.0) Michael D. Adams,2022-01-15 This book is intended for use in teaching undergraduate courses on continuous time and or discrete time signals and systems in engineering and related disciplines It provides a detailed introduction to continuous time and discrete time signals and systems with a focus on both theory and applications The mathematics underlying signals and systems is presented including topics such as signal properties elementary signals system properties continuous time and discrete time linear time invariant systems convolution continuous time and discrete time Fourier series the continuous time and discrete time Fourier transforms frequency spectra and the bilateral and unilateral Laplace and z transforms Applications of the theory are also explored including filtering equalization amplitude modulation sampling feedback control systems circuit analysis Laplace domain techniques for solving differential equations and z domain techniques for solving difference equations Other supplemental material is also included

such as a detailed introduction to MATLAB a review of complex analysis an introduction to partial fraction expansions an exploration of time domain techniques for solving differential equations and information on online video lecture content for material covered in the book Throughout the book many worked through examples are provided Problem sets are also provided for each major topic covered   *Essentials of MATLAB Programming* Stephen Chapman,2005-10-06 This text is intended for a first course in programming for engineers and scientists using MATLAB Chapman s Essentials of MATLAB uses a proven top down design methodology used consistently throughout the text which encourages students to think about proper design of a program before coding It also teaches the proper use of MATLAB s built in tools to make programming and debugging easier Tools covered include the Editor Debugger Workspace Browser Help Browser and GUI design tools Important Notice Media content referenced within the product description or the product text may not be available in the ebook version   *Introduction to Modeling and Numerical Methods for Biomedical and Chemical Engineers* Edward Gatzke,2021-09-02 This textbook introduces the concepts and tools that biomedical and chemical engineering students need to know in order to translate engineering problems into a numerical representation using scientific fundamentals Modeling concepts focus on problems that are directly related to biomedical and chemical engineering A variety of computational tools are presented including MATLAB Excel Mathcad and COMSOL and a brief introduction to each tool is accompanied by multiple computer lab experiences The numerical methods covered are basic linear algebra and basic statistics and traditional methods like Newton s method Euler Integration and trapezoidal integration The book presents the reader with numerous examples and worked problems and practice problems are included at the end of each chapter   **The British National Bibliography** Arthur James Wells,2009   Subject Guide to Books in Print ,2001   **MATLAB Programming for Engineers** Stephen J. Chapman,2002 A guide to MATLAB as a programming language to solve technical problems The first six chapters are designed to serve as a text for an introductory programming and problem solving course for freshman engineering students while the remaining four chapters covering advanced topics such as input output and graphical user interfaces can be used as a reference by engineering students or engineers who use MATLAB in their jobs The second edition is devoted to MATLAB versions 6 0 and 6 1 c Book News Inc   **Essentials of MATLAB♭ Programming** Stephen Chapman,2017   **Engineering Student Survival Guide (BEST Series)** Krista Donaldson,2004-04-29 The third edition of this wildly successful text provides information and strategies for engineering students to get the most out of their college education From freshman orientation to senior year and beyond this book covers topics pertinent and unique to all engineering students   **Mathematical Reviews** ,2006   **Forthcoming Books** Rose Arny,2004   **Technometrics** ,2005   **Applied Numerical Methods for Engineers and Scientists** Singiresu S.
