

ETL Testing Interview Questions and Answers

What is ETL?

In data warehousing architecture, ETL is an important component, which manages the data for any business process. ETL stands for **Extract, Transform and Load**. Extract does the process of reading data from a database. Transform does the converting of data into a format that could be appropriate for reporting and analysis. While, load does the process of writing the data into the target database.

Explain what are the ETL testing operations includes?

ETL testing includes

- Verify whether the data is transforming correctly according to business requirements
- Verify that the projected data is loaded into the data warehouse without any truncation and data loss
- Make sure that ETL application reports invalid data and replaces with default values
- Make sure that data loads at expected time frame to improve scalability and performance

Mention what are the types of data warehouse applications and what is the difference between data mining and data warehousing?

The types of data warehouse applications are

- Info Processing
- Analytical Processing
- Data Mining

Data mining can be define as the process of extracting hidden predictive information from large databases and interpret the data while data warehousing may make use of a data mine for analytical processing of the data in a faster way. Data warehousing is the process of aggregating data from multiple sources into one common repository.

What are the various tools used in ETL?
