

Evolution & Natural Selection

DOODLE NOTES

GENETIC Evolution

natural selection changes the range of traits in a population - there are 3 ways it can change. Let's look at a moth population that shows

Evolution by natural selection

Describe the theory of natural selection and how this theory was first conceived (thought of).

An English naturalist named Charles Darwin went on a voyage around the world. He noticed that animals in similar environments had similar characteristics. For example, in the Galápagos islands, Darwin observed similar but non-identical species of finches on each island. He noticed that their beaks seemed to be adapted to their food source. After some time thinking and the work of other scientists, Darwin developed his theory of natural selection.

Individuals with favorable traits survive and reproduce, passing on those traits to their offspring. Over time, the population becomes better adapted to its environment.

An example of natural selection!

<p>A population of light brown moths lived in an area of dark wood. They had very few birds.</p>	<p>One day a hawk came to hunt for the common variation.</p>
<p>The hawk with dark fur was camouflaged against the dark wood where they live.</p>	<p>The light brown moths are now more likely to get eaten - they are the birds' favorite!</p>
<p>A higher proportion of dark moths reproduced, passing on the beneficial trait.</p>	<p>Over time, the population has changed so that most of the moths have dark fur.</p>

Stabilizing

Stabilizing selection occurs when the average trait value is favored and extreme values are selected against. This results in a narrower and taller distribution curve.

GENE FLOW

What is it? Movement of genes in or out of a population. It happens through movement of individuals or the movement of gametes, such as pollen or sperm. This can bring new alleles into a population or change the frequency of existing alleles.

Example: A population of butterflies with a mix of colors. A new butterfly with a different color is introduced, changing the gene pool.
