Solve the differential equations

$$M(x,y)dx + N(x,y)dy = 0$$

$$(4x^3 + 3y^2 + \cos(x))dx + (6xy + 2)dy = 0$$

$$(1 - 2xy)dx + (4y^3 - x^2)dy = 0$$

For exactness,  $M_y = N_x$

**Methods for Constructing Exact Solutions of Partial Differential Equations** Sergey V. Meleshko, 2005-09-16

Differential equations especially nonlinear present the most effective way for describing complex physical processes. Methods for constructing exact solutions of differential equations play an important role in applied mathematics and mechanics. This book aims to provide scientists, engineers, and students with an easy-to-follow but comprehensive description of the methods for constructing exact solutions of differential equations. *Handbook of Exact Solutions for Ordinary Differential Equations*

Valentin F. Zaitsev, Andrei D. Polyanin, 2002-10-28. Exact solutions of differential equations continue to play an important role in the understanding of many phenomena and processes throughout the natural sciences in that they can verify the correctness of or estimate errors in solutions reached by numerical, asymptotic, and approximate analytical methods. The new edition of this bestselling handbook *Handbook of Differential Equations* Daniel Zwillinger, Vladimir Dobrushkin, 2021-12-30

Through the previous three editions, *Handbook of Differential Equations* has proven an invaluable reference for anyone working within the field of mathematics, including academics, students, scientists, and professional engineers. The book is a compilation of methods for solving and approximating differential equations. These include the most widely applicable methods for solving and approximating differential equations, as well as numerous other methods. Topics include methods for ordinary differential equations, partial differential equations, stochastic differential equations, and systems of such equations. Included for nearly every method are: The types of equations to which the method is applicable; The idea behind the method; The procedure for carrying out the method; At least one simple example of the method; Any cautions that should be exercised; Notes for more advanced users. The fourth edition includes corrections many supplied by readers, as well as many new methods and techniques. These new and corrected entries make necessary improvements in this edition. **Applied Partial**

**Differential Equations** Paul DuChateau, David W. Zachmann, 2002-01-01. Superb introduction devotes almost half its pages to numerical methods for solving partial differential equations, while the heart of the book focuses on boundary value and initial boundary value problems on spatially bounded and on unbounded domains, integral transforms, uniqueness, and continuous dependence on data, first-order equations, and more. Numerous exercises included with solutions for many at end of book. For students with little background in linear algebra, a useful appendix covers that subject briefly. [Handbook of Ordinary Differential Equations](#) Andrei D. Polyanin, Valentin F. Zaitsev, 2017-11-15. *The Handbook of Ordinary Differential Equations: Exact Solutions, Methods, and Problems* is an exceptional and complete reference for scientists and engineers, as it contains over 7,000 ordinary differential equations with solutions. This book contains more equations and methods used in the field than any other book currently available. Included in the handbook are exact, asymptotic, approximate, analytical, numerical, symbolic, and qualitative methods that are used for solving and analyzing linear and nonlinear equations. The authors also present formulas for effective construction of solutions and many different equations arising in various applications, like heat

transfer elasticity hydrodynamics and more This extensive handbook is the perfect resource for engineers and scientists searching for an exhaustive reservoir of information on ordinary differential equations Handbook of Nonlinear Partial Differential Equations Andrei D. Polyanin,Valentin F. Zaitsev,2004-06-02 The Handbook of Nonlinear Partial Differential Equations is the latest in a series of acclaimed handbooks by these authors and presents exact solutions of more than 1600 nonlinear equations encountered in science and engineering many more than any other book available The equations include those of parabolic hyperbolic elliptic and other types and the authors pay special attention to equations of general form that involve arbitrary functions A supplement at the end of the book discusses the classical and new methods for constructing exact solutions to nonlinear equations To accommodate different mathematical backgrounds the authors avoid wherever possible the use of special terminology outline some of the methods in a schematic simplified manner and arrange the equations in increasing order of complexity Highlights of the Handbook **Differential Equation Based Method for Accurate Approximations in Optimization** ,1990 **Higher Mathematics for Students of Chemistry and Physics** Joseph William Mellor,1902 Differential Equations Forest Ray Moulton,1930 Differential Equations with Mathematica, Revised for Mathematica 3.0 Kevin R.
