W. A. Milne, 1999-06 Through ten previous editions Gardner's Chemical Synonyms and Trade Names has become one of the best known and most widely used sources of information on chemicals in commerce This edition includes the results of the

continuing research underlying this reference work and has seen a major expansion of the information provided for individual chemical compounds. The reference contains some 35 000 entries many of which are new to this edition. Gardner's features a comprehensive selection of chemicals. The main criterion for inclusion in Gardner's is a material's importance as a commercially available chemical. Thus all bulk inorganic chemicals, major pesticides, dyestuffs, surfactants, metals and alloys are included. The 5 000 highest volume chemicals in the US as defined by application of the Toxic Substances Control Act are all represented. Almost all records describing pure chemicals now carry the appropriate CAS Registry Number and the associated EINECS number. In addition the Merck Index Number is provided for all chemicals which also appear in the Twelfth Edition of the Merck Index. Entries wherever possible contain detailed information on chemical composition, functions, applications and suppliers. A feature new to this edition is the inclusion of physical property data for pure chemicals. Data that has been provided as available includes the melting point, boiling point, density or specific gravity, refractive index, optical rotation, ultraviolet absorption, solubility and acute toxicity. Thousands of new synonyms have been included in Gardner's to make it one of the most comprehensive sources of chemical synonym information available. Overall both the structure of Gardner's and the quality of the information it contains have been greatly improved in this edition. The result is a reference tool that no chemical professional should be without.

Desk Reference Michael Ash, 1990. There is hardly a technical library in the world in which the volumes of the Chemical Formulary Volumes 1-34 do not occupy a prominent place. It does not duplicate any of the formulas included in previous volumes but lists a wide array of modern and salable products from all branches of the chemical industries. An excellent reference for formulation problems.

Contents: I Introduction, II Adhesives, III Beverages and Foods, IV Cosmetics, V Coatings, VI Detergents, VII Drugs, VIII Metal Treatments, IX Polishes, X Elastomers, Polymers and Resins, XI Miscellaneous, Appendix, Index.

Preface: Chemistry as taught in our schools and colleges concerns chiefly synthesis, analysis and engineering and properly so. It is part of the right foundation for the education of the chemist. Many a chemist entering an industry soon finds that most of the products manufactured by his concern are not synthetic or definite complex compounds but are mixtures, blends or highly complex compounds of which he knows little or nothing. The literature in this field if any may be meager, scattered or obsolete. Even chemists with years of experience in one or more industries spend considerable time and effort in acquainting themselves with any new field which they may enter. Consulting chemists similarly have to solve problems brought to them from industries foreign to them. There was a definite need for an up to date compilation of formulae for chemical

compounding and treatment Since the fields to be covered are many and varied an editorial board of chemists and engineers engaged in many industries was formed Many publications laboratories manufacturing firms and Individuals have been consulted to obtain the latest and best information It is felt that the formulas given in this volume will save chemists and allied workers much time and effort
