Tiwari, Nigel P. Brunton, Charles Brennan, 2013-01-02 Handbook of Plant Food Phytochemicals Phytochemicals are plant

derived chemicals which may bestow health benefits when consumed whether medicinally or as part of a balanced diet. Given that plant foods are a major component of most diets worldwide, it is unsurprising that these foods represent the greatest source of phytochemicals for most people. Yet it is only relatively recently that due recognition has been given to the importance of phytochemicals in maintaining our health. New evidence for the role of specific plant food phytochemicals in protecting against the onset of diseases such as cancers and heart disease is continually being put forward. The increasing awareness of consumers of the link between diet and health has exponentially increased the number of scientific studies into the biological effects of these substances. The Handbook of Plant Food Phytochemicals provides a comprehensive overview of the occurrence, significance, and factors affecting phytochemicals in plant foods. A key objective of the book is to critically evaluate these aspects. Evaluation of the evidence for and against the quantifiable health benefits being imparted is expressed in terms of the reduction in the risk of disease conferred through the consumption of foods that are rich in phytochemicals. With world leading editors and contributors, the Handbook of Plant Food Phytochemicals is an invaluable, cutting edge resource for food scientists, nutritionists, and plant biochemists. It covers the processing techniques aimed at the production of phytochemical rich foods, which can have a role in disease prevention, making it ideal for both the food industry and those who are researching the health benefits of particular foods. Lecturers and advanced students will find it a helpful and readable guide to a constantly expanding subject area. Urban Futures Utpal Sharma, R.

Parthasarathy, Aparna, 2025-08-22 This book explores the built environment through aspects of spatial planning, ecology, infrastructure, and urban identity. By presenting case studies from both developed and developing nations, the chapters reveal the interconnectedness of urban spaces with socio-economic and cultural dynamics, in addition to ecology and the environment. Urban areas and cities are key players in boosting economic development and enhancing social welfare. Nonetheless, the swift pace of urbanisation presents intricate challenges and obstacles in creating inclusive, sustainable, and resilient living spaces that are modern and capable of accommodating the growing needs of urban populations. This book probes various issues, interventions, and designs from diverse cities, diving into the specifics of sector-related concerns and new insights pertaining to land use planning and its implications, urban design frameworks, green and blue infrastructure, informal settlements, sustainability through resource conservation, transportation modelling, waste management, and ultimately, the image of the city. This book will be advantageous and appealing to students and researchers involved in the built environment, urban planning and design, heritage and vernacular identity, infrastructure, nature-based solutions, and urban studies. It will also attract the attention of professionals and policymakers associated with these fields who are engaged in shaping urban futures. *Underutilized Tuber Crops of the Himalayan Region* Arun Kumar Gupta, Pradeep Singh Negi, 2026-02-12 *Underutilized Tuber Crops of the Himalayan Region: Nutraceutical Potential, Processing, and Applications* explores significant yet underutilized edible tubers known for their bioactive and pharmacological properties, as well as their
