Anton Sculean Periodontal Regenerative Therapy:

Endodontic-Periodontal Lesions Igor Tsesis, Carlos E. Nemcovsky, Joseph Nissan, Eyal Rosen, 2019-03-12 This book presents a multidisciplinary evidence based approach to the management of teeth with lesions of endodontic periodontal origin The book opens by addressing the etiology and classification of endodontic periodontal lesions and demonstrates its relevance to the daily practice Specific endodontic prosthetic and periodontal considerations that should be incorporated into clinical decision making and treatment planning are then discussed in detail Subsequent chapters describe modern clinical procedures in periodontal regenerative treatment describe vertical root fractures as an endodontic periodontal lesion examine treatment alternatives following the extraction of teeth with endodontic periodontal lesions and discuss possible biological complications in implant supported oral rehabilitation Finally a summary chapter considers the integration of clinical factors and patient values into clinical decision making The text is accompanied by many figures presenting informative clinical examples The authors are internationally renowned scientists and clinicians from the specialties of Endodontology Periodontology and Oral Rehabilitation Owing to its multidisciplinary and comprehensive nature the book will be relevant and interesting to the entire dental community

Periodontal Regenerative Therapy Anton Sculean, 2010 This text provides the clinician with an overview on the use of regenerative techniques in periodontology The chapters are designed to cover the most important aspects related to anatomy wound healing regenerative materials surgical techniques and clinical applications as related to regenerative procedures

Biologics and Biology-based Regenerative Treatment Approaches in Periodontics, An Issue of Dental Clinics of North America, E-Book Alpdogan Kantarci, Andreas Stavropoulos, Anton Sculean, 2021-11-22 In this issue of Dental Clinics guest editors Alpdogan Kantarci Andreas Stavropoulos and Anton Sculean bring their considerable expertise to the topic of Biologics and Biology based Regenerative Treatment Approaches in Periodontics Provides in depth clinical reviews on the latest updates in Biologics and Biology based Regenerative Treatment Approaches in Periodontics providing actionable insights for clinical practice Presents the latest information on this timely focused topic under the leadership of experienced editors in the field Authors synthesize and distill the latest research and practice guidelines to create these timely topic based reviews

The International Journal of Periodontics & Restorative Dentistry ,2002 **Medical Principles and Practice** ,2007 Journal of Long-term Effects of Medical Implants ,1999 **Wound Healing in Periodontology and Implantology** Anton Sculean,2015 Biomimetics in Periodontal Regeneration David Lee Cochran,2003 Evolving periodontal regenerative therapies The biological concept Presurgical evaluation and patient selection Treatment of intrabony periodontal defects Mechanism of action for enamel matrix derivative Treatment outcome Combined regenerative therapy Treatment of furcation involved teeth Use of enamel matrix derivative with root coverage procedures Safety of enamel matrix derivative Concepts of Periodontal Regeneration and Regenerative Medicine M. Soory,2015 Diverse technologies have emerged in recent times to streamline applications of more predictable materials and methods in order to attain the elusive goal of periodontal regeneration Their applications current limitations and future directions are reviewed In addition to grafting materials and barrier membranes to exclude epithelial downgrowth and promote mesenchymal elements the environment of the cell is pivotal to events that follow These include application of scaffolds lasers harnessing bone anabolic activity and the resolution of inflammation using cell and gene based protein and peptide therapy Recommendations embrace suitable targets for patient outcome based on clinical applications of scientific principles for more predictable and consistent results in regenerating hard and soft tissues of a functional periodontium They must however stay within safety requirements and an effective cost benefit ratio Regenerative medicine and dentistry combine applications of molecular biology material science bioengineering and nanoscience in order to repair regenerate and replace

missing tissue The author discusses these applications as well as the mechanisms that modulate cells and matrices in periodontal regeneration as well as regenerative medicine Regenerative Dentistry Mona Marei,2010-06-06 Dental caries periodontitis tooth loss and bone resorption are considered prevalent health problems that have direct affect on the quality of life While advances in stem cell biology and biotechnology have sparked hope for devastating maladies such as diabetes cardiovascular diseases etc it also provides a strategy of regenerative therapy for dental tissues From the prospective of tissue engineering it is of utmost importance to understand and emulate the complex cell interactions that make up a tissue or organ Unlike other tissues in the body dental tissues are unique in their development function and even in their maintenance throughout life The harmonized stimulations of biology and mechanical regulators to promote cellular activities have matured our understanding of the value of regenerative therapy of dental tissue versus the reparative treatment In this book we review the current knowledge available to regenerate alveolar bone periodontal structure and pulp dentin complex The book provides researchers with detailed information about development and functional characteristics of the dental unit with detailed protocols covering a comprehensive range of various approaches to engineer dental tissues to use isolated cells or cell substitutes as cellular replacement to use acellular biomaterials capable of inducing tissue regeneration and or to use a combination of cells biomaterial and growth factors We are well aware with the concept changes in the field toward in vitro biomimetics of in vivo tissue development The theoretical frame work integrating these concepts of developmental biology and developmental engineering is yet to be emphasized and implemented Until this happens we consider this book of regenerative dentistry as a call for scientists to achieve researchers to innovate practitioners to apply and students to learn the art and science of regenerative therapy in dentistry Table of Contents Introduction to Regenerative Dentistry Tissue Engineering Alveolar Bone Tissue Engineering of the Periodontal Tissues Dynamics for Pulp Dentin Tissue Engineering in Operative Dentistry Periodontal Regenerative Therapy Chandni Monga,Amarjit Singh Gill,Paramjit Kaur Khinda,2014-02 The regeneration of the periodontium can be distinguished from many other regenerative processes because of the periodontium s extremely limited endogenous regenerative capability Additionally regeneration of the periodontium involves the regeneration of at least three unique tissues and their complex structures Recent evidence suggests that periodontal ligament retains its regenerative capacity to different degrees throughout adulthood which is attributed to the remaining progenitor stem cells within the periodontium that maintain their proliferation and differentiation potential and the regeneration of periodontal tissues can be stimulated using growth factors and other host modulating agents Periodontal Regeneration Alan M. Polson,1994 They assert that regeneration can be achieved only by proper understanding of all cellular tissue and clinical components and they provide the foundation necessary for this understanding
