Chapter 1

Problem 1.1

A nucleus, originally at rest, decays radioactively by emitting an electron of momentum $1.73 \text{ MeV}/c$, and at right angles to the direction of the electron a neutrino with momentum $1.00 \text{ MeV}/c$. (The MeV (million electron volt) is a unit of energy, used in modern physics, equal to $1.60 \times 10^{-6} \text{ erg}$. Correspondingly, MeV/c is a unit of linear momentum equal to $5.34 \times 10^{-17} \text{ gm-cm/sec.}$) In what direction does the nucleus recoil? What is its momentum in MeV/c ? If the mass of the residual nucleus is $3.90 \times 10^{-22} \text{ gm}$, what is its kinetic energy, in electron volts?

Place the nucleus at the origin, and suppose the electron is emitted in the positive y direction, and the neutrino in the positive x direction. Then the resultant of the electron and neutrino momenta has magnitude

$$|\mathbf{p}_{e+\nu}| = \sqrt{(1.73)^2 + 1^2} = 2 \text{ MeV}/c,$$

and its direction makes an angle

$$\theta = \tan^{-1} \frac{1.73}{1} = 60^\circ$$

with the x axis. The nucleus must acquire a momentum of equal magnitude and directed in the opposite direction. The kinetic energy of the nucleus is

$$T = \frac{p^2}{2m} = \frac{4 \text{ MeV}^2 c^{-2}}{2 \cdot 3.9 \cdot 10^{-22} \text{ gm}} \cdot \frac{1.78 \cdot 10^{-27} \text{ gm}}{1 \text{ MeV } c^{-2}} = 9.1 \text{ eV}$$

This is much smaller than the nucleus rest energy of several hundred GeV , so the non-relativistic approximation is justified.

Power Series Solutions to Nonlinear Ordinary Differential Equations and Related Problems of Physics, Engineering, and Life Sciences Nathaniel S. Barlow, Steven J. Weinstein, 2025-10-09 This book is the first to offer a systematic methodology for solving nonlinear ordinary differential equations via power series specifically those arising in mathematical physics It provides tools to eliminate the tedious manipulation of infinite series enabling recursive computation of all terms The authors also present a structured approach to overcoming convergence issues inherent to such methods demonstrating that power series solutions can be both accessible and practical The authors teaching philosophy that mathematics is best learned by doing is reflected throughout with the text largely composed of idea driven examples and physically motivated problems from their own research Proofs are included only when necessary for readers to construct custom theorems or definitions relevant to real world applications Ultimately the book shows that power series methods can effectively complement numerical techniques offering applied mathematicians a powerful and versatile toolset This book is intended for researchers engaged in applied mathematics and is structured so it can be used in a one semester advanced undergraduate or graduate course Necessary course prerequisites are a knowledge of differential equations analytical and numerical methods linear algebra and complex variables

The Mechanisms of Fast Reactions in Solution Edward Caldin, 2001 Published a few years after the author's death this volume is a sequel to his 1964 book *Fast Reactions in Solution* the material is entirely new extending investigation beyond now well established fast reaction techniques to consider their contribution to understanding events on the molecular scale After an introductory chapter on origins methods mechanisms and rate constants coverage includes the rates of diffusion controlled reactions mathematical theory of diffusion flash photolysis techniques fluorescence quenching Marcus theory involving proton transfer and group transfer reactions in solutions and electron transfer reactions Annotation copyrighted by Book News Inc Portland OR

Conformable Dynamic Equations on Time Scales Douglas R. Anderson, Svetlin G. Georgiev, 2020-08-29 The concept of derivatives of non integer order known as fractional derivatives first appeared in the letter between L'Hopital and Leibniz in which the question of a half order derivative was posed Since then many formulations of fractional derivatives have appeared Recently a new definition of fractional derivative called the fractional conformable derivative has been introduced This new fractional derivative is compatible with the classical derivative and it has attracted attention in areas as diverse as mechanics electronics and anomalous diffusion *Conformable Dynamic Equations on Time Scales* is devoted to the qualitative theory of conformable dynamic equations on time scales This book summarizes the most recent contributions in this area and vastly expands on them to conceive of a comprehensive theory developed exclusively for this book Except for a few sections in Chapter 1 the results here are presented for the first time As a result the book is intended for researchers who work on dynamic calculus on time scales and its applications Features Can be used as a textbook at the graduate level as well as a reference book for several disciplines Suitable for an audience of specialists such as mathematicians physicists engineers and biologists Contains a new definition of fractional derivative About the Authors Douglas R Anderson is professor and chair of the mathematics department at Concordia College Moorhead His research areas of interest include dynamic equations on time scales and Ulam type stability of difference and dynamic equations He is also active in investigating the existence of solutions for boundary value problems Svetlin G Georgiev is currently professor at Sorbonne University Paris France and works in various areas of mathematics He currently focuses on harmonic analysis partial differential equations ordinary differential equations Clifford and quaternion analysis dynamic calculus on time scales and integral equations

Numerical Solution of Ordinary Differential Equations Donald Greenspan, 2006 This work meets the need for an affordable textbook that helps in understanding numerical solutions of ODE Carefully structured by an experienced textbook author it provides a survey of ODE for various applications both classical and modern including such special applications as relativistic systems The examples are carefully explained and compiled into an algorithm each of which is presented independent of a specific programming language Each chapter is rounded off with exercises

Statistical Mechanics ,1973 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 90 years The Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole

spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.
