Collin Hal Amick, 2004 The British National Bibliography Arthur James Wells, 2000 Modified Sheet Pile Abutments for
Low-volume Road Bridges Ryan Richard Evans, Wayne Klaiber, 2012 To date there have been few investigations of the
substructures in low volume road LVR bridges Steel sheet piling has the potential to provide an economical alternative to
concrete bridge abutments but it needs investigation with regard to vertical and lateral load resistance construction methods
and performance monitoring The objectives of this project were to develop a design approach for sheet pile bridge abutments
for short span low volume bridges formulate an instrumentation and monitoring plan to evaluate performance of sheet pile
abutment systems and understand the cost and construction effort associated with building the sheet pile bridge abutment
demonstration project Three demonstration projects Boone Blackhawk and Tama Counties were selected for the design
construction and monitoring of sheet pile abutments bridges Each site was unique and required site specific design and
instrumentation monitoring The key findings from this study include the following 1 sheet pile abutment bridges provide an
effective solution for LVR bridges 2 the measured stresses and deflection were different from the assumed where the
differences reflect conservatism in the design and the complex field conditions and 3 additional research is needed to
optimize the design Seasonal Instrumentation of SHRP Pavements, the Ohio State University William Edward Wolfe, 1998
Environmental instruments to measure temperature soil moisture and frost depth were installed at five test sections of the
SHRP pavement project on U S 23 north of Delaware Ohio At three of these locations tensiometers which a designed to
measure negative pore pressures were added to the instrumentation package The pore pressures as recorded by the
tensiometers have increased from initially negative to positive values at each location and throughout the profile in the first
year after installation of the instrument package was completed At the same time data collected from the moisture probes
were showing a corresponding increase in soil moisture content Samples of an aggregate base and clayey subgrade material
were collected at several locations on the DEL 23 project by ODOT They were delivered to the OSU soil mechanics laboratory
for classification and permeability determination The aggregate base conformed to ODOT material specification Item 304
Measured permeability coefficients ranged between 2×10^{-6} to the minus 2 and 2.9×10^{-6} to the minus 2 cm sec The clayey
material was classified as a low plasticity clay AASHTO Classification A 6 to A 7 6 with permeability coefficients ranging
between 1×10^{-6} to the minus 6 and 4×10^{-6} to the minus 8 cm sec
