Synergistic Airframe-propulsion Interactions and Integrations Steven F. Yaros, 1998 This white paper addresses the subject of Synergistic Airframe Propulsion interactions and integrations SnAPII The benefits of SnAPII have not been as extensively explored This is due primarily to the separateness of design process for airframes and propulsion systems with only unfavorable interactions addressed The question How to design these two systems in such a way that the airframe needs the propulsion and the propulsion needs the airframe is the fundamental issue addressed in this paper Successful solutions to this issue depend on appropriate technology ideas This paper first details

some ten technologies that have yet to make it to commercial products with limited exceptions and that could be utilized in a synergistic manner. Then these technologies either alone or in combination are applied to both a conventional two engine transonic transport and to an unconventional transport the Blended Wing Body. Lastly combinations of these technologies are applied to configuration concepts to assess the possibilities of success relative to five of the ten NASA aeronautics goals. These assessments are subjective but they point the way in which the applied technologies could work together for some break through benefits. *Government Reports Announcements*, 1975 **Journal of the Japan Society for Aeronautical and Space Sciences** ,
