The question is Where do you even start How do you build your understanding of machine learning to a point where you can start using it to make your life better What are the critical things you need to learn about machine learning to get started as a beginner What areas of your life can you apply your knowledge of machine learning If you have these and other related questions this book is for you so keep reading Here s just a tiny fraction of what you ll discover in this book The history of machine learning What machine learning can do for your business The machine learning algorithms How to develop a machine learning model from start to finish How neural networks work in machine learning The auto encoders What you need to know about EM algorithm and how it is applied Logistic regression for machine learning The theory and setup in deep learning with tensorflow Natural language processing Data cleansing and much much more Take a second to imagine how you d feel understanding how to can control a computer system to deliver output as you desire without hiring an expert or at least understanding how computers make predictions If you really want to find out how life would be once you know how to harness the power of modern technology to do anything you want even if you are a complete beginner Scroll up and click Buy Now With 1 Click or Buy Now to get started   Python Machine Learning Oliver Soranson,2019-11-07 You must have gotten the opportunity to pay for parking at a mall where a machine is able to tell the amount of money you owe depending on how long your car was in the parking lot and probably a few other features However have you ever wondered just how the parking meter is able to differentiate between currencies and give you the right change Furthermore have you ever wondered how applications such as Uber can predict the amount of time it will take you to get home to such a high degree of accuracy yet traffic can be so unpredictable If you have ever asked yourself questions about the basic or especially the complex predictions and conclusions machines are making these days then your answer lies in Machine learning Human beings have different ways in which they learn some of the methods including experience or even having someone teach them Therefore to try to make machines even more useful to human beings it is possible to teach machines to make decisions in several ways and these can learn and have faster and more accurate output compared to how a human being would compete People usually understand the concept of how a machine will do something you have programmed it to do because people came to terms with that years ago However what still fascinates people is how a machine is able to make decisions independently by considering a situation and even making a prediction that turns out to be true Machine learning is at a very high level today when you compare to a few years back so that would make you wonder just how advanced machines will be in the next 20 to 30 years It is highly likely that machines will become better versions of us but we hope they will never get so independent and intelligent that they eventually decide to rule over us The objective of writing this book is to help a beginner to understand the basics of machine learning to the point of even training a machine to carry out some functions This book also explains the advantages associated with using Python since an individual does not necessarily have to be an expert coder to start using it Some of the main topics discussed in this book include The history of machine learning Key machine learning
