

Cooling Theory Lectures Notes

Markus Hupfer and members of the team!

September 7, 2024

These are the notes for the first lecture, *Foundations of Cooling Theory*. These are generalised and give insights on problems for all of the cooling games. Some are generalised, while some are specific to the lecture, the latter contribution to Cooling Theory and the book of Hoffman and Pines *Foundations of Game-Theoretic Models*. I also used several other sources for historical, historical topics in Part II course given at Cambridge on Cooling Theory and Game-Theoretic games in Professor John Fudenberg and his own paper given there at Cambridge that on Subgame-Perfect Equilibria (see game by Professor John Fudenberg). I also included some more recent work in 2023 course, Applied Maths for the Phys. Mathematics. The last version of the notes is based on Mark Hupfer's course notes, "Graph-Based Cooling".

All credits go to those who did my best.

Contents

I. Introduction	10
