**Lectures on Fundamental Concepts of Algebra and Geometry** John Wesley Young, William Wells Denton, Ulysses Grant Mitchell, 1911

**Hilbert, Göttingen and the Development of Modern Mathematics** Joan Roselló, 2019-02-01 David Hilbert is one of the outstanding mathematicians of the twentieth century and probably the most influential This book highlights Hilbert's contributions to mathematics putting them in their historical social and cultural context In doing so particular attention is paid to Hilbert's axiomatic method and his proposal for the foundations of mathematics the so called Hilbert's program The book also discusses the development of algebraic number theory the theory of integral equations modern algebra and the structural image of mathematics In addition it considers the famous list of Mathematical Problems presented in Paris in 1900 the mathematical tradition of the University of Göttingen the great debate on the foundations of mathematics in the twenties between formalists and intuitionists and finally Hilbert's work on the theory of relativity and the foundations of quantum mechanics The book will primarily appeal to an academic audience although it will also be of interest to general interest science readers

*Empiricism, Logic and Mathematics* Hans Hahn, 2012-12-06 The role Hans Hahn played in the Vienna Circle has not always been sufficiently appreciated It was important in several ways In the first place Hahn belonged to the trio of the original planners of the Circle As students at the University of Vienna and throughout the first decade of this century he and his friends Philipp Frank and Otto Neurath met more or less regularly to discuss philosophical questions When Hahn accepted his first professorial position at the University of Czernowitz in the north east of the Austrian empire and the paths of the three friends parted they decided to continue such informal discussions at some future time perhaps in a somewhat larger group and with the cooperation of a philosopher from the university Various events delayed the execution of the project Drafted into the Austrian army during the first world war Hahn was wounded on the Italian front Toward the end of the war he accepted an offer from the University of Bonn extended in recognition of his remarkable mathematical achievements He remained in Bonn until the spring of 1921 when he returned to Vienna and a chair of mathematics at his alma mater There in 1922 the Mach Boltzmann professorship for the philosophy of the inductive sciences became vacant by the death of Adolf Stöhr and Hahn saw a chance to realize his and his friends old plan

researches tend toward the same aim He must master their conceptions and subject them to a new criticism This work so engrosses the attention of the investigator that he has little time left for casting a glance over the branches of science which are developing beside him Yet this necessity also weighs upon his soul If on the one hand he ought to study special problems on the other he cannot exempt himself from considering the ends set before special research by rising to a general outlook which shall command the view of a broader scientific basis This double necessity causes a conflict of tendencies and this conflict in our system of production results in a loss of time and of work from which the intellectual world suffers Most investigators if they are not rightly directed shut themselves up in a narrow circle and fall into a blind empiricism Others lose themselves in the region of confused generalities while a few finer spirits find the way for themselves and often must win again by fresh efforts that which they should have a right to expect as the outcome of the completed work of their companions in labor But the age of heroes that of Descartes or Leibniz whose genius opened all the doors of science seems closed forever The conquests of the past weigh upon the present and upon the future And if it is permissible to hope that a happier use of our intellectual power
