Bryan Kolb, Ian Q. Whishaw, 2012-12-20 Drawing on their extensive experience in teaching and research the authors explore the biological basis of behaviour whilst emphasising clinical aspects of neuroscience and reinforcing its relationship to the human experience. *Why Torture Doesn't Work* Shane O'Mara, 2015-11-30 Torture is banned because it is cruel and inhumane. But as Shane O'Mara writes in this account of the human brain under stress another reason torture should never be condoned is because it does not work the way torturers assume it does. In countless films and TV shows such as *Homeland* and *24* torture is portrayed as a harsh necessity. If cruelty can extract secrets that will save lives so be it CIA officers and others conducted torture using precisely this justification. But does torture accomplish what its defenders say it does? For ethical reasons there are no scientific studies of torture. But neuroscientists know a lot about how the brain reacts to fear, extreme temperatures, starvation, thirst, sleep deprivation and immersion in freezing water, all tools of the torturer's trade. These stressors create problems for memory, mood and thinking and sufferers predictably produce information that is deeply unreliable and for intelligence purposes even counterproductive. As O'Mara guides us through the neuroscience of suffering he reveals the brain to be much more complex than the brute calculations of torturers have allowed and he points the way to a humane approach to interrogation founded in the science of brain and behavior. Torture may be effective in forcing confessions as in Stalin's Russia. But if we want information that we can depend on to save lives O'Mara writes our model should be Napoleon. It has always been recognized that this way of interrogating men by putting them to torture produces nothing worthwhile. *Invitation to Holistic Health* Charlotte Eliopoulos, 2010-08-24 Provides solid principles and proven measures to promote optimal health and well being using a holistic approach.

Maximow, 1930 Histologie **The Thinking Machine** Charles Judson Herrick, 1929 This is a book about the natural history of human nature It is not a book about philosophy for philosophers It is a plain and straightforward statement for ordinary people of what another very ordinary sort of man who has considerable experience with the mechanisms of human life and how they work thinks about it all We all want to understand human nature better because it is our nature The better we understand it the more likely we are to get along with ourselves our neighbors and our surroundings in general We want to make life more worth while to get as much out of it as we can and to put as much into it as we can to make a better living and to have as much fun doing it as possible We need to know how we live what the apparatus of life is and how it works in order to make a better job of it Preface **Adult Intellectual Assessment** Robert J. Gregory, 1987 Parkinson's Disease and Nonmotor Dysfunction Ronald F. Pfeiffer, Ivan Bodis-Wollner, 2007-11-10 Parkinson s Disease and Nonmotor Dysfunction fills a major gap in the current rapidly growing body of knowledge concerning Parkinson s disease Drs Pfeiffer and Bodis Wollner have correctly perceived that many nonmotor features of Parkinson s disease are given insufficient attention in the medical

literature Unfortunately they are often also given insufficient attention by the practicing neurologists who see these patients As recently pointed out there is clearly much more to Parkinson s disease than depletion of the nigrostriatal dopamine system 1 Parkinson s disease not just multiple system atrophy is a multisystem disorder both pathologically and in its clinical manifestations This is clearly true for the various motor system abnormalities which are not fully corrected by dopamine replacement therapy strategies but also for the nonmotor system abnormalities that are the subject of this volume Although recently there has been increased awareness of the cognitive psychiatric and sleep disorders commonly associated with Parkinson s disease many of their manifestations remain under recognized and their importance in managing patients is underestimated Even less attention is paid to the myriad of other nonmotor disturbances that plague these patients For example among the autonomic disorders although orthostatic hypotension is well recognized it is usually attributed to dopaminergic medications rather than to effects of the underlying disease Urologic disorders are also very familiar in these patients but may not be properly understood or well managed
