IT Architect Series: Designing Risk in IT Infrastructure Daemon

Behr,2018-08-10 What do we mean when we say designing risk Every event that occurs does not happen in isolation An event is a combination of people places and things and is associated with a time period Each event affects other events like a ripple in a pond They are all interrelated and woven into an invisible fabric that is the current state of being One cannot ignore this fact when designing an IT infrastructure or planning a long term technological strategy because infrastructures are not comprised of detached components operating in isolation Risk is defined by a probability and an impact which can be represented qualitatively or quantitatively Or in simple terms something may happen and it might hurt a lot or a little You can guess and gamble your way through it or you can truly understand what your options are and start planning This book will give you the ability to see beyond a fault or failure and start understanding the relationships between risk response resources cost and acceptance
