  CUDA for Engineers Duane Storti,Mete Yurtoglu,2015-11-02 CUDA for Engineers gives you direct hands on engagement with personal high performance parallel computing enabling you to do computations on a gaming level PC that would have required a supercomputer just a few years ago The authors introduce the essentials of CUDA C programming clearly and concisely quickly guiding you from running sample programs to building your own code Throughout you ll learn from complete examples you can build run and modify complemented by additional projects that deepen your understanding All projects are fully developed with detailed building instructions for all major platforms Ideal for any scientist engineer or student with at least introductory programming experience this guide assumes no specialized background in GPU based or parallel computing In an appendix the authors also present a refresher on C programming for those who need it Coverage includes Preparing your computer to run CUDA programs Understanding CUDA s parallelism model and C extensions Transferring data between CPU and GPU Managing timing profiling error handling and debugging Creating 2D grids Interoperating with OpenGL to provide real time user interactivity Performing basic simulations with differential equations Using stencils to manage related computations across threads Exploiting CUDA s shared memory capability to enhance performance Interacting with 3D data slicing volume rendering and ray casting Using CUDA libraries Finding more CUDA resources and code Realistic example applications include Visualizing functions in 2D and 3D Solving differential equations while changing initial or boundary conditions Viewing processing images or image stacks Computing inner products and centroids Solving systems of linear algebraic equations Monte Carlo computations   **Euro-Par 2024: Parallel Processing** Jesus Carretero,Sameer Shende,Javier Garcia-Blas,Ivona Brandic,Katzalin Olcoz,Martin Schreiber,2024-08-25 The three volume set LNCS 14801 14802 and 14803 constitutes the proceedings of the 30th European Conference on Parallel and Distributed Processing Euro Par 2024 which took place in Madrid Spain during August 26 30 2024 The 88 full papers included in the proceedings were carefully reviewed and selected from 293 submissions They were organized in topical sections as follows Part I Programming compilers and performance scheduling resource management cloud edge computing and workflows Part II Architectures and accelerators data analytics AI and computational science Part III Theory and algorithms multidisciplinary domain specific and applied parallel and distributed computing   **Large-Scale Scientific Computations** Ivan Lirkov,Svetozar Margenov,2024-05-23 This book constitutes the refereed proceedings of the 14th International Conference on Large Scale Scientific Computations LSSC 2023 held in Sozopol Bulgaria during June 5 9 2023 The 49 full papers included in this book were carefully reviewed and selected from 61 submissions They were organized in topical sections as follows preconditioning and multilevel methods fractures and mixed dimensional modeling discretizations solvers and methodology machine learning and model order reduction for large scale predictive simulations fractional differential problems theoretical aspects algorithms and applications variational analysis and optimal control stochastic

optimal control and numerical methods in economics and finance tensor methods for big data analytics and low rank approximations of PDEs solutions applications of metaheuristics to large scale problems large scale models numerical methods parallel computations and applications HPC and HPDA algorithms and applications *Computer Architecture* Joseph D. Dumas II,2016-11-25 Not only does almost everyone in the civilized world use a personal computer smartphone and or tablet on a daily basis to communicate with others and access information but virtually every other modern appliance vehicle or other device has one or more computers embedded inside it One cannot purchase a current model automobile for example without several computers on board to do everything from monitoring exhaust emissions to operating the anti lock brakes to telling the transmission when to shift and so on Appliances such as clothes washers and dryers microwave ovens refrigerators etc are almost all digitally controlled Gaming consoles like Xbox PlayStation and Wii are powerful computer systems with enhanced capabilities for user interaction Computers are everywhere even when we don t see them as such and it is more important than ever for students who will soon enter the workforce to understand how they work This book is completely updated and revised for a one semester upper level undergraduate course in Computer Architecture and suitable for use in an undergraduate CS EE or CE curriculum at the junior or senior level Students should have had a course s covering introductory topics in digital logic and computer organization While this is not a text for a programming course the reader should be familiar with computer programming concepts in at least one language such as C C or Java Previous courses in operating systems assembly language and or systems programming would be helpful but are not essential
