Additionally, there is a need that we prepare long-term plans to maintain technological, social and economic development for a sustainable ecology and biological life. Thanks to this Research Topic, we aim to expand our knowledge about the potential micro and macro determinants of environmental quality and sustainable development, such as economic activities, green economic and growth indicators, specifically with respect to developments in green economy, green trade, green finance and green innovation, as they pertain to circular economy and changing economic complexity. Potential topics include, but are not limited to, Innovation, economic structure and environmental quality, Trade and environment relationship, Green Economy Indicators, such as Green Finance, Green Trade, Green Products and Green Innovation, and their economic and environmental impacts, Economic complexity and its environmental consequences, Circular Economy as a driver of sustainable development, Theoretical formulation and empirical analysis of green economy and green growth, Economic and social determinants of sustainable development.
