

C++ Guide

NUMBER & CHARACTER

Introduction
C++ is a general-purpose programming language that combines the efficiency of C with the ease of use of C++.

Getting Started
This section covers the basic syntax and structure of C++ programs, including the use of headers and namespaces.

Variables
Variables are used to store data in a program. They can be of various types, including integers, floating-point numbers, and characters.

Control Flow
Control flow statements allow the programmer to direct the execution of the program. This includes conditional statements and loops.

Arrays
Arrays are used to store multiple values of the same type. They are indexed from 0 to the number of elements minus 1.

Strings
Strings are used to store text. In C++, strings are represented as arrays of characters, and there are specialized functions for string manipulation.

Pointers
Pointers are variables that store the memory address of another variable. They are used for dynamic memory management and efficient data access.

Advanced Topics
This section covers more complex C++ features, such as templates, namespaces, and the standard library.
