Contemporary Communication Systems Using Matlab:

Contemporary Communication Systems Using MATLAB John G. Proakis, Masoud Salehi, 1998 This text contains a large number of MATLAB based problems dealing with topics covered in a first course in communication systems Each chapter contains fundamental concepts briefly reviewed and presents illustration problems using MATLAB Each chapter contains a list of MATLAB files used [Contemporary Communication Systems Using MATLAB and Simulink](#) John G. Proakis, Masoud Salehi, Gerhard Bauch, 2004 Featuring a variety of applications that motivate students this book serves as a companion or supplement to any of the comprehensive textbooks in communication systems The book provides a variety of exercises that may be solved on the computer using MATLAB The authors assume that the student is familiar with the fundamentals of MATLAB By design the treatment of the various topics is brief The authors provide the motivation and a short introduction to each topic establish the necessary notation and then illustrate the basic concepts by means of an example

Contemporary Communication Systems Using MATLAB John G. Proakis, Masoud Salehi, 2000 This supplement to any standard communication systems text is one of the first books to successfully integrate the use of MATLAB in the study of communication systems concepts and problems It has been developed for instructors and students who wish to make use of MATLAB as an integral part of their study The former will find the means by which to use MATLAB as a powerful tool to motivate students and illustrate essential theory without having to customize the applications themselves the latter will find relevant problems quickly and easily The book includes numerous MATLAB based simulations and examples of communication systems while providing a good balance of theory and hands on computer experience This Updated Printing revises the book and MATLAB files available for downloading from the Brooks Cole Bookware Companion Resource Center Web Site to MATLAB V5 **Modern Communication Systems Using MATLAB** Gerhard Bauch, 2011-12 Featuring a

Klein, 2011-08-18 Have you ever wanted to know how modern digital communications systems work Find out with this step by step guide to building a complete digital radio that includes every element of a typical real world communication system Chapter by chapter you will create a MATLAB realization of the various pieces of the system exploring the key ideas along the way as well as analyzing and assessing the performance of each component Then in the final chapters you will discover how all the parts fit together and interact as you build the complete receiver In addition to coverage of crucial issues such as timing carrier recovery and equalization the text contains over 400 practical exercises providing invaluable preparation for industry where wireless communications and software radio are becoming increasingly important A variety of extra resources are also provided online including lecture slides and a solutions manual for instructors Performance

Optimization of Digital Communications Systems Vladimir Mitlin, 2006-03-21 Because fine tuning the parameters of a system is critical to a developer s success Performance Optimization of Digital Communications Systems examines particular optimization problems in digital communications presenting analytical techniques in combination with SystemView and MATLAB simulations Consisting of ten chapters this monograph presents Discrete Systems Laboratory Using MATLAB Martin Schetzen, Vinay K. Ingle, 2000 This brief paperbound supplement provides 16 hands on laboratory experiments that students can perform using MATLAB in lab sections that accompany lecture courses in Linear Systems or DSP The 16 experiments are grouped in four main topic areas sampling and digital to analog D A conversion the discrete time Fourier transform gain and phase shift studies of digital filters and analog to digital A D quantization See TOC below for a listing of specific lab experiments The goal of these experiments is to enable students to understand the full physical significance of key concepts through a deeper understanding of the underlying mathematical formulas not to teach MATLAB In each experiment students enter problem parameter values plot the results using MATLAB s powerful plotting functions and then respond to questions in the manual that require them to analyze and interpret these results The experiments challenge students to approach the study of these topics in the role of an experimental investigator students are required to define the quantitative values and size properties of each design criterion in a problem As a result students develop an appreciation of the physical meaning of the derived results their theoretical and physical implications and the use of the scientific method
