

Basic heat load calculation for air-conditioning system

(3) How to calculate heat load

"Heat transfer load (2)"

Calculation example

Let's determine the heat transfer load of a cubic building surrounded by walls as shown in the drawing.

Coefficient of overall heat transfer : U-factor

$$U = \frac{1}{\frac{1}{23} + \frac{0.02}{1.5} + \frac{0.1}{1.4} + \frac{0.05}{0.042} + \frac{0.02}{1.5} + \frac{1}{9}}$$
$$= 0.69 \quad [W / m^2 \cdot K]$$

Wall surface area : A

$$A = (1 \times 1) \times 6 = 6 \quad [m^2]$$

Heat transfer load : q_k

$$q_k = 0.69 \times 6m^2 \times \{26^\circ C - (-4)^\circ C\} = 124 \quad [W]$$

Wall materials

Material	Thickness (mm)	λ (W / m · K)
①. Mortar	20	1.5
②. Concrete	100	1.4
③. Glass wool 24K	50	0.042
④. Mortar	20	1.5

The heat transfer load can be reduced with the use of a material having a low thermal conductivity or thicker member.

Cooling Load Calculation And Design Of Air Conditioning:

HVAC Cooling Load - Calculations and Principles A. Bhatia, 2014-10-16 Heating and cooling load calculations are carried out to estimate the required capacity of heating and cooling systems which can maintain the required conditions in the conditioned space To estimate the required cooling or heating capacities one has to have information regarding the design indoor and outdoor conditions specifications of the building specifications of the conditioned space such as the occupancy activity level various appliances and equipment used etc and any special requirements of the particular application For comfort applications the required indoor conditions are fixed by the criterion of thermal comfort while for industrial or commercial applications the required indoor conditions are fixed by the particular processes being performed or the products being stored Generally heating and cooling load calculations involve a systematic and stepwise procedure which account for all the building energy flows In practice a variety of methods ranging from simple rules of thumb to complex transfer function methods are used to arrive at the building loads This short quick book provides a procedure for preparing a manual calculation for cooling load using CLTD CLF method suggested by ASHRAE and includes two detailed examples For more advanced methods such as TFM the reader should refer to ASHRAE and other handbooks Learning Objective At the end of this course the student should be able to
