Mathematical Research for Blockchain Economy Panos Pardalos, Ilias Kotsireas, Yike Guo, William Knottenbelt, 2020-02-13

This book presents the best papers from the 1st International Conference on Mathematical Research for Blockchain Economy MARBLE 2019 held in Santorini Greece While most blockchain conferences and forums are dedicated to business applications product development or Initial Coin Offering ICO launches this conference focused on the mathematics behind blockchain to bridge the gap between practice and theory Every year thousands of blockchain projects are launched and circulated in the market and there is a tremendous wealth of blockchain applications from finance to healthcare education media logistics and more However due to theoretical and technical barriers most of these applications are impractical for use in a real world business context The papers in this book reveal the challenges and limitations such as scalability latency privacy and security and showcase solutions and developments to overcome them Technology in Financial Markets

Marco Dell'Erba, 2024-01-16 In recent years technology has emerged as a disruptive force in the economy and finance leading to the establishment of new economic and financial paradigms Focusing on blockchain technology and its implementations in finance Technology in Financial Markets proposes a novel theoretical approach to disruption Relying on complexity science it develops a dynamic perspective on the study of disruptive phenomena and their relationship to financial regulation and the law It identifies the intrinsic interconnections characterizing the multidimensional technology driven transformations involving commercial practices capital markets corporate governance central banking and financial networks From this perspective it considers the way they are reflected at the level of contract law financial law corporate law central banking law The book adopts a unique comparative approach and explains and clarifies the factual and historical dimensions underlying the emergence of the crypto economy In this book blockchain is used as a case study Blockchain exemplifies the way each subpart of the financial system commercial practices financial markets corporations central banking networks and consequently each subcategory of financial regulation evolves on an individual basis It shows how such subparts evolve altogether bringing systemic transformations and ultimately leading to the creation of new economic and financial paradigms The book considers both these perspectives analysing the evolution of each subpart and emphasizing the interconnected transformations In doing this it adopts the structure of an ascending climax starting from contracts and escalating to increasingly broad dimensions in particular capital markets corporate governance central banking and financial networks Essays in Honor of Joon Y.
