

#### Problem 4 (Capital Budgeting Techniques)

You are a financial analyst for the Hittle Company. The director of capital budgeting has asked you to analyze two proposed capital investments, Projects X and Y. Each project has a cost of \$10,000, and the cost of capital for each is 12%. The projects' expected net cash flows are as follows:

<u>Year</u>	<u>Expected Net Cash Flows</u>	
	<u>Project X</u>	<u>Project Y</u>
0	-\$10,000	-\$10,000
1	6,500	3,500
2	3,000	3,500
3	3,000	3,500
4	1,000	3,500

- Calculate each project's payback period, net present value, internal rate of return, and profitability index.
- Which project or projects should be accepted if they are independent?
- Which project should be accepted if they are mutually exclusive?
- How might a change in the cost of capital produce a conflict between the NPV and IRR rankings of these two projects? Would this conflict exist if  $r$  were 5%?

Sagner,2007 Capital budgeting techniques that use discounted cash flow analysis are widely recommended in the financial literature and frequently used by business However there is accumulating evidence that companies are reluctant to commit funds to long term projects The most likely explanation is that actual experience has resulted in disappointing returns often below a company s cost of capital No capital budgeting technique currently in use applies probabilities to future inflow estimates to adjust the financial analysis to previous experience with the requesting business unit The discounted payback plus technique recommended in this paper may be a reasonable alternative approach to the analysis of a capital budgeting project yielding more conservative results based on the expected value of cash inflows beyond the point of payback

of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research  
contributions to Integer Programming have been made in very different branches of mathematics and its applications Since  
these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive  
bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in  
1970 at the Institut fur konometrie und Operations Research University of Bonn Since then many collaborators have  
contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great  
perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to  
incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the  
invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this  
reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint  
and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704  
different publications by 6767 authors which were classified by 11839 descriptor entries      **Capital Budgeting

decisions that directly protect the health safety and well being of the worker The guidelines have evolved from a series of  
symposia on Ergonomic Guidelines and Problem Solving Initially experts in each area selected were asked to write draft  
guidelines These guidelines were circulated to participants at the symposia and to other experts for review before being  
comprehensively revised In some instances these guidelines cannot be considered complete but it is important now to put

some recommendations forward as guidelines It is hoped that as new research emerges each guideline will be updated Each guideline has been divided into two parts Part I contains the guidelines for the practitioner and Part II provides the scientific basis or the knowledge for the guide Such separation of the applied and theoretical content was designed to facilitate rapid incorporation of the guide into practice The target audience for this book is the practitioner The practitioner may be a manager production system designer shop supervisor occupational health and safety professional union representative labor inspector or production engineer For each of the guidelines relevant practitioners are described Topics covered include work space design tool design work rest schedules illumination and maintenance
