Blockchain Applications in Food Supply Chain Management Chen Zhang, Yu Gong, Steve Brown, 2023-03-31 This book contributes to blockchain applications in food supply chain management from both theoretical and practical perspectives. By using the case study research method, it empirically investigates why and how food companies implement blockchain technology. Moreover, it proposes a conceptual framework based on the case findings and extant literature. The book provides empirical evidence to verify academic findings such as critical success factors and barriers. Furthermore, it identifies the implementation process to answer the how question. Uniquely, it applies the innovation process model and the practice-based view (PBV) to studies on food supply chains and blockchain. Thus, building on the original model and theory, it enriches the theory on blockchain implementation, making it a valuable asset for all researchers and practitioners interested in blockchain adoption and food supply chain management.

*Global Supply Chains In The Age Of Ai: Strategies And Emerging Technologies* Helena S Wisniewski, 2025-02-25 The rise of AI and its convergence with emerging technologies like IoT, digital twins, robotics, and blockchain is revolutionizing multiple industries. This book reveals how emerging technologies can fortify supply chains against vulnerabilities and reshape them into sustainable, resilient, and efficient systems. It offers a comprehensive explanation of these technologies and their practical applications, backed by compelling case studies. The COVID-19 pandemic turbocharged public awareness of supply chains, and geopolitical crises have intensified this awareness. These events revealed vulnerabilities in supply chains, emphasizing the urgent need for resilience and sustainability. The book illustrates how AI and emerging technologies can fulfil this need. It provides lessons learned from these and other occurrences to plan, prepare, and build a path forward. This book begins by tracing the evolution of the global supply chain since World War II. It then explores traditional technologies utilized to increase supply chain efficiencies, followed by chapters providing a deep dive into cutting-edge emerging technological innovations and how they are transforming the supply chain and strengthening it against vulnerabilities. It concludes with diverse perspectives on the path forward. Each of the seven chapters is enriched with relevant case studies that illustrate the tangible impacts of these technological solutions. This book is essential reading for anyone interested in AI and emerging technologies in supply chains. It is ideal for academics and students, postgraduate and advanced undergraduate, and as a practical guide for industry professionals, corporate executives, and government officials to address supply chain management issues and apply technologies and systems for optimization. The case studies have links to online resources for further exploration and can be used as student assignments.

This book describes the choices that Walmart made and explains the steps they took to be successful. The goal of the book is not to imply that the only way to achieve success is by following Walmart's process exactly. Rather, this book allows you to use the same basic constructs but choose implementation details that fit your environment so that you can achieve success on your own terms.

With IBM CICS Transaction Server TS for z/OS, you also have the resources for a successful transition to becoming your own cloud service provider. IBM Design Thinking is a methodology that is used by designers to solve complex problems by focusing on individual user roles. This book is organized from the viewpoint of these roles in the IT organization. It provides guidance in the following areas:

- What does the line of business expect from a cloud service?
- What topology and high availability characteristics does the system programmer need?
- What unique facilities does IBM CICS provide to the service developer?
- How does a developer discover and consume services in an application?
- How does the operations team manage the service in production?

One of the services that Walmart built and how the decisions made by each job role affected the overall outcome of the service are used as an example throughout this book. It shares the experience of the team that created this and other business-critical cloud services that are all hosted in CICS. Comments from Walmart IT leaders that were captured during the authoring process are presented to emphasize why the company adopted cloud and how cloud has helped Walmart to achieve success.

Developers understand the risk protection that IT groups provide. They also understand that waiting to move applications to production or for a service to be provisioned compromises the agile environment required by today's businesses. This book is intended for enterprise service providers looking to enable their developers to increase the speed at which functionality is delivered to the business. **The Phoenix Encounter Method: Lead Like Your Business Is on Fire!** Ian C. Woodward, V. "Paddy" Padmanabhan, Sameer Hasija, Ram Charan, 2020-10-27

A radical new leadership strategy to transform business as we know it from a dream team of INSEAD professors and mega bestselling author Ram Charan. The business landscape is littered with the wreckage of companies that crashed and burned when an apocalypse came in the shape of new competitive technologies, upstart entrants, demographic shifts, and new world orders. Who can feel safe in firestorm change? The authors of *The Phoenix Encounter Method* don't advise safety. In fact, their method of leadership thinking requires you to imagine burning your business to the ground, throwing yourself into a firestorm, and turning the upheaval to your organization's advantage. It can then rise phoenix-like from the ashes, stronger and more powerful than ever.

Written with a sense of urgency and purposefully radical provocation, *The Phoenix Encounter Method* represents the forward thinking of legendary business guru Ram Charan and professors from the senior global leadership program of INSEAD, one of the world's top graduate business schools. The resulting methodology, based on analysis of thousands of articles, studies, reports, and academic and business practice, was field-tested in real life. Phoenix Encounters conducted with more than fifteen hundred senior executives from startups and family businesses to legacy companies.
