Implementation of the Federal Cloud Computing Initiative Congressional Research Service,2015-02-19 Cloud computing is a new name for an old concept the delivery of computing services from a remote location analogous to the way electricity water and other utilities are provided to most customers Cloud computing services are delivered through a network usually the Internet Some cloud services are adaptations of familiar applications such as email and word processing Others are new applications that never existed as a local application such as online maps and social networks Since 2009 the federal government has been shifting its data storage needs to cloud based services and away from agency owned data centers This shift is intended to reduce the total investment by the federal government in information technology IT data centers as well as realize other stated advantages of cloud adoption efficiency accessibility collaboration rapidity of innovation reliability and security In December 2010 the U S Chief Information Officer CIO released A 25 Point Implementation Plan to Reform Federal IT Management as part of a comprehensive effort to increase the operational efficiency of federal technology assets One element of the 25 Point Plan is for agencies to shift to a Cloud First policy which is being implemented through the Federal Cloud Computing Strategy The Cloud First policy means that federal agencies must 1 implement cloud based solutions whenever a secure reliable and cost effective cloud option exists and 2 begin reevaluating and modifying their individual IT budget strategies to include cloud computing However there are challenges facing agencies as they make this shift For example some agency CIOs have stated that in spite of the stated security advantages of cloud computing they are in fact concerned about moving their data from their data centers which they manage and control to outsourced cloud services This and other concerns must be addressed to build an agency culture that trusts the cloud Congress has a number of means to monitor the status of the Federal Cloud Computing Initiative FCCI Individual committees may wish to monitor agencies under their jurisdiction by holding hearings requesting review of an agency s status through the agency itself or a GAO study and or assessing an agency s progress and projected goals against the stated goals of the FCCI   The Cloud-to-Thing Continuum Theo Lynn,John G. Mooney,Brian Lee,Patricia Takako Endo,2020-08-09 The Internet of Things offers massive societal and economic opportunities while at the same time significant challenges not least the delivery and management of the technical infrastructure underpinning it the deluge of data generated from it ensuring privacy and security and capturing value from it This Open Access Pivot explores these challenges presenting the state of the art and future directions for research but also frameworks for making sense of this complex area This book provides a variety of perspectives on how technology innovations such as fog edge and dew computing 5G networks and distributed intelligence are making us rethink conventional cloud computing to support the Internet of Things Much of this book focuses on technical aspects of the Internet of Things however clear methodologies for mapping the business value of the Internet of Things are still missing We provide a value mapping framework for the Internet of Things to address this gap While there is much hype about theInternet of Things we have yet to reach the tipping point As
