regulation is a better fit This book is a springboard to further investigate how a simple antitrust enforcement tool having turned competition law into an economic regulation policy can drive our economy leading both the antitrust and regulatory interventions in tackling today s market challenges **Choice** ,2004 <u>Machine Learning</u> Ethem Alpaydin,2016-10-07 A concise overview of machine learning computer programs that learn from data which underlies applications that include recommendation systems face recognition and driverless cars Today machine learning underlies a range of applications we use every day from product recommendations to voice recognition as well as some we don t yet use everyday including driverless cars It is the basis of the new approach in computing where we do not write programs but collect data the idea is to learn the algorithms for the tasks automatically from data As computing devices grow more ubiquitous a larger part of our lives and work is recorded digitally and as Big Data has gotten bigger the theory of machine learning the foundation of efforts to process that data into knowledge has also advanced In this book machine learning expert Ethem Alpaydin offers a concise overview of the subject for the general reader describing its evolution explaining important learning algorithms and presenting example applications Alpaydin offers an account of how digital technology advanced from number crunching mainframes to mobile devices putting today s machine learning boom in context He describes the basics of machine learning and some applications the use of machine learning algorithms for pattern recognition artificial neural networks inspired by the human brain algorithms that learn associations between instances with such applications as customer segmentation and learning recommendations and reinforcement learning when an autonomous agent learns act so as to maximize reward and minimize penalty Alpaydin then considers some future directions for machine learning and the new field of data science and discusses the ethical and legal implications for data privacy and security **Fundamentals of Probability and Statistics for Machine Learning** Ethem Alpaydin,2025-12-02 An introductory textbook for undergraduate or beginning graduate students that integrates probability and statistics with their applications in machine learning Most curricula have students take an undergraduate course on probability and statistics before turning to machine learning In this innovative textbook Ethem Alpayd n offers an alternative tack by integrating these subjects for a first course on learning from data Alpayd n accessibly connects machine learning to its roots in probability and statistics starting with the basics of random experiments and probabilities and eventually moving to complex topics such as artificial neural networks With a practical emphasis and learn by doing approach this unique text offers comprehensive coverage of the elements fundamental to an empirical understanding of machine learning in a data science context Consolidates foundational knowledge and key techniques needed for modern data science Covers mathematical fundamentals of probability and statistics and ML basics Emphasizes hands on learning Suits undergraduates as well as self learners with basic programming experience Includes slides solutions and code **Artificial Intelligence Abstracts** ,1990 **A First Course in Machine Learning - Solutions Manual** Taylor & Francis Group,2011-10-24 **Aanwinsten van de Centrale Bibliotheek (Queteletfonds)** Bibliothèque centrale
