Cross-Sectional Area Constraint: $(w_1 + w_3)(H_1 + H_2 + 1)/2 = 150$ or
$h_1 = (w_1 + w_3)(H_1 + H_2 + 1)/2 - 150 = 0$;
Excavated Material Constraint: $(w_1 + w)(H_1/2) = (2)(w_2 + 2)(H_2 + 1)/2$ or
$h_2 = (w_1 + w)(H_1/2) - (w_2 + 2)(H_2 + 1) = 0$
The design variables are not independent; they are related as follows:

$$\tan\theta = \frac{H_1}{(w - w_1)/2} = \frac{H_2 + 1}{(w_2 - 2)/2} = \frac{H_1 + H_2 + 1}{(w_3 - w_1)/2}$$

So we get two more constraints from these relationships, as

$$h_3 = \frac{H_1}{w - w_1} - \frac{H_2 + 1}{w_2 - 2} = 0;$$

$$h_4 = \frac{H_1}{w - w_1} - \frac{H_1 + H_2 + 1}{w_3 - w_1} = 0$$

All the design variables must also be nonnegative:
$$-w \le 0; \quad -w_1 \le 0; \quad -w_2 \le 0; \quad -w_3 \le 0; \quad -H_1 \le 0; \quad -H_2 \le 0$$

Formulation 2:

Step 1: Problem Statement
Shown above

Step 2: Data and Information Collection
Shown above

Step 3: Definition of Design Variables
w_1, H_1, H_2 (m), and s (unitless) are chosen as design variables which are defined below in relation to Figure E2.22:

$$s = \tan\theta$$

$$w = w_1 + \frac{2H_1}{s}$$

$$w_3 = w_1 + \frac{2(H_1 + H_2 + 1)}{s}$$

$$w_2 = 2 + \frac{2(H_2 + 1)}{s}$$

Step 4: Optimization Criterion
Optimization criterion is to minimize the volume of excavation, and the cost function is defined as:

Introduction To Optimal Design Arora Solution:

Introduction to Optimum Design Jasbir Singh Arora,2004-06-02 Optimization is a mathematical tool developed in the early 1960 s used to find the most efficient and feasible solutions to an engineering problem It can be used to find ideal shapes and physical configurations ideal structural designs maximum energy efficiency and many other desired goals of engineering This book is intended for use in a first course on engineering design and optimization Material for the text has evolved over a period of several years and is based on classroom presentations for an undergraduate core course on the principles of design Virtually any problem for which certain parameters need to be determined to satisfy constraints can be formulated as a design optimization problem The concepts and methods described in the text are quite general and applicable to all such formulations Inasmuch the range of application of the optimum design methodology is almost limitless constrained only by the imagination and ingenuity of the user The book describes the basic concepts and techniques with only a few simple applications Once they are clearly understood they can be applied to many other advanced applications that are discussed in the text Allows engineers involved in the design process to adapt optimum design concepts in their work using the material in the text Basic concepts of optimality conditions and numerical methods are described with simple examples making the material high teachable and learnable Classroom tested for many years to attain optimum pedagogical effectiveness Introduction to Optimum Design Jasbir Arora,2017-10-30 Introduction to Optimum Design Third Edition describes an organized approach to engineering design optimization in a rigorous yet simplified manner It illustrates various concepts and procedures with simple examples and demonstrates their applicability to engineering design problems Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text Excel and MATLAB are featured as learning and teaching aids **Introduction to Optimum Design** Jasbir Arora,2016-04-28 Introduction to Optimum Design Fourth Edition carries on the tradition of the most widely used textbook in engineering optimization and optimum design courses It is intended for use in a first course on engineering design and optimization at the undergraduate or graduate level in engineering departments of all disciplines with a primary focus on mechanical aerospace and civil engineering courses Through a basic and organized approach the text describes engineering design optimization in a rigorous yet simplified manner illustrates various concepts and procedures with simple examples and demonstrates their applicability to engineering design problems Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text using Excel and MATLAB as learning and teaching aids This fourth edition has been reorganized rewritten in parts and enhanced with new material making the book even more appealing to instructors regardless of course level **Introduction to Optimum Design** Jasbir Singh Arora,2023-11-15 2025 Textbook and Academic Authors Association TAA McGuffey Longevity Award Winner Introduction to Optimum Design Fifth Edition is the most widely used textbook in engineering optimization and optimum design courses It is intended for use in a first course

on engineering design and optimization at the undergraduate or graduate level within engineering departments of all disciplines but primarily within mechanical aerospace and civil engineering The basic approach of the text presents an organized approach to engineering design optimization in a rigorous yet simplified manner illustrating various concepts and procedures with simple examples and demonstrating their applicability to engineering design problems Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text Excel and MATLAB are featured as learning and teaching aids This new edition has been enhanced with new or expanded content in such areas as reliability based optimization metamodeling design of experiments robust design nature inspired metaheuristic search methods and combinatorial optimizaton Describes basic concepts of optimality conditions and numerical methods with simple and practical examples making the material highly teachable and learnable Includes applications of optimization methods for structural mechanical aerospace and industrial engineering problems Covers practical design examples and introduces students to the use of optimization methods Serves the needs of instructors who teach more advanced courses Features new or expanded contents in such areas as design under uncertainty reliability based design optimization metamodeling response surface method design of experiments nature inspired metaheuristic search methods and robust design   Case Studies in Optimal Design and Maintenance Planning of Civil Infrastructure Systems Dan M. Frangopol,1999-01-01 Sponsored by the Structural Engineering Institute of ASCE This collection contains 19 papers on the optimal design and maintenance planning of civil infrastructure systems such asbridges buildings transmission line structures and nuclear power plants The authors coming from Austria Canada Denmark England Germany Israel Japan Malaysia Mexico Switzerland and the United States offer case studies that are detailed and research findings that describe applications of life cycle reliability and optimization theories to civil infrastructure systems Topics include prioritization of bridge maintenance needs life cycle optimization of structures cost effectiveness optimization for aseismic design criteria of buildings condition assessment and maintenance of aging structures in critical facilities condition assessment of bridges optimization of quality assurance of welded structures optimal reliability based bridge maintenance planning effective reanalysis for damaged structures optimal design of transmission line structures optimization and reliability lifetime oriented design and optimum policy for civil infrastructure improvement decision making This book serves as a valuable reference to engineers and managers concerned with design and maintenance planning of civil infrastructure systems   Music-Inspired Harmony Search Algorithm Zong Woo Geem,2009-05-12 Calculus has been used in solving many scientific and engineering problems For optimization problems however the differential calculus technique sometimes has a drawback when the objective function is step wise discontinuous or multi modal or when decision variables are discrete rather than continuous Thus researchers have recently turned their interests into metaheuristic algorithms that have been inspired by natural phenomena such as evolution animal behavior or metallic annealing This book especially focuses on a music inspired metaheuristic algorithm harmony search Interestingly

there exists an analogy between music and optimization each musical instrument corresponds to each decision variable musical note corresponds to variable value and harmony corresponds to solution vector Just like musicians in Jazz improvisation play notes randomly or based on experiences in order to find fantastic harmony variables in the harmony search algorithm have random values or previously memorized good values in order to find optimal solution **Progress In Astronautics and Aeronautics** Manohar P.
