Butler, 1998-04-13 A celebrated classic in the field updated and expanded to include the latest computerized calculation techniques In 1964 James N Butler published a book in which he presented some simple graphical methods of performing acid base solubility and complex formation equilibrium calculations Today both the book and these methods have become standard for generations of students and professionals in fields ranging from environmental science to analytical chemistry Named a Citation Classic by the Science Citation Index in 1990 the book *Ionic Equilibrium* continues to be one of the most widely used texts on the subject So why tamper with near perfection by attempting a revision of that classic The reason is simple the recent rapid development and wide availability of personal computers In the revised *Ionic Equilibrium* Dr Butler updates his 1964 work by abandoning the slide rule and graph paper for the PC spreadsheet He also expands the original coverage with extensive material on basic principles and recent research The first part of *Ionic Equilibrium* is devoted to the fundamentals of acid base solubility and complex formation equilibria In the second part the author discusses oxidation reduction equilibria develops the principles of carbon dioxide equilibria presents case studies demonstrating the ways in which carbon dioxide equilibria are used in physiology and oceanography and explores the possibility of a pH scale for brines The concluding chapter written by David R Cogley gives examples of general computer programs that are capable of performing equilibrium calculations on systems of many components Replete with real world examples details of important calculations and practical problems *Ionic Equilibrium* is an ideal course text for students of environmental chemistry engineering or health analytical chemistry oceanography geochemistry biochemistry physical chemistry and clinical chemistry It is also a valuable working resource for professionals in those fields as well as industrial chemists involved with solution chemistry [Carbon Dioxide Equilibria and Their Applications](#) James N. Atkins, Loretta Jones, 2007-08 Written for calculus inclusive general chemistry courses *Chemical Principles* helps students develop chemical insight by showing the connections between fundamental chemical ideas and their applications Unlike other texts it begins with a detailed picture of the atom then builds toward chemistry's frontier continually demonstrating how to solve problems think about nature and matter and visualize chemical concepts as working chemists do Flexibility in level is crucial and is largely established through clearly labeling separating in boxes the calculus coverage in the text Instructors have the option of whether to incorporate calculus in the coverage of topics The multimedia integration of *Chemical Principles* is more deeply established than any other text for this course Through the unique eBook the comprehensive Chemistry Portal Living Graph icons that connect the text to the Web and a complete set of animations students can take full advantage of the wealth of resources available to them to help them learn and gain a deeper understanding

*Guide to Best Practices for Ocean Acidification Research and Data Reporting*, 2011 The ocean presently takes up one fourth of the carbon dioxide emitted to the atmosphere by human activities thereby increasing ocean acidity While our understanding of the possible consequences of ocean acidification is still rudimentary both the scientific community and the society at large are increasingly concerned about the potential risks associated with ocean acidification for marine organisms and ecosystems The number of scientists involved in ocean acidification research grew rapidly over the past few years and will continue to rise with the launch of new coordinated national programmes Students young researchers and established scientists inexperienced with the intricacies of the seawater carbonate chemistry and perturbation experiments will enter the field and will benefit from guidelines and standards for ocean acidification research The European Project on Ocean Acidification EPOCA and the Intergovernmental Oceanographic Commission IOC initiated the process that led after an open community review to the production of this guide
