Orlicz Spaces and Modular Spaces J. Musielak, 1983-11 [Orlicz spaces and modular spaces](#), 1983 **Orlicz Spaces and Generalized Orlicz Spaces** Petteri Harjulehto, Peter Hästö, 2019-05-07 This book presents a systematic treatment of generalized Orlicz spaces also known as Musielak Orlicz spaces with minimal assumptions on the generating function It introduces and develops a technique centered on the use of equivalent functions Results from classical functional analysis are presented in detail and new material is included on harmonic analysis Extrapolation is used to prove for example the boundedness of Calderón Zygmund operators Finally central results are provided for Sobolev spaces including Poincaré and Sobolev Poincaré inequalities in norm and modular forms Primarily aimed at researchers and PhD students interested in Orlicz spaces or generalized Orlicz spaces this book can be used as a basis for advanced graduate courses in analysis

[Function Spaces](#) Henryk Hudzik, Leszek Skrzypczak, 2000-07-18 This volume compiles research results from the fifth Function Spaces International Conference held in Poznań Poland It presents key advances modern applications and analyses of function spaces and contains two special sections recognizing the contributions and influence of Władysław Orlicz and Genadii Lozanowski [Lebesgue and Sobolev Spaces with Variable Exponents](#) Lars Diening, 2011-03-31 The field of variable exponent function spaces has witnessed an explosive growth in recent years The standard reference article for basic properties is already 20 years old Thus this self contained monograph collecting all the basic properties of variable exponent Lebesgue and Sobolev spaces is timely and provides a much needed accessible reference work utilizing consistent notation and terminology Many results are also provided with new and improved proofs The book also presents a number of applications to PDE and fluid dynamics *Variable Lebesgue Spaces* David V. Cruz-Uribe, Alberto Fiorenza, 2013-02-12 This book provides an accessible introduction to the theory of variable Lebesgue spaces These spaces generalize the classical Lebesgue spaces by replacing the constant exponent p with a variable exponent $p(x)$ They were introduced in the early 1930s but have become the focus of renewed interest since the early 1990s because of their connection with the calculus of variations and partial differential equations with nonstandard growth conditions and for their applications to problems in physics and image processing The book begins with the development of the basic function space properties It avoids a more abstract functional analysis approach instead emphasizing an hands on approach that makes clear the similarities and differences between the variable and classical Lebesgue spaces The subsequent chapters are devoted to harmonic analysis on variable Lebesgue spaces The theory of the Hardy Littlewood maximal operator is completely developed and the connections between variable Lebesgue spaces and the weighted norm inequalities are introduced The other important operators in harmonic analysis singular integrals Riesz potentials and approximate identities are treated using a powerful generalization of the Rubio de Francia theory of extrapolation from the theory of weighted norm inequalities The final chapter applies the results from previous chapters to prove basic results about variable Sobolev spaces **Function**
